QUESTION 41Resources must authenticate to an identity provider.You need to configure the Azure Access Control service. What should you recommend? To answer, select the appropriate responses for each requirement in the answer area.Hot Area:

Action
You must distribute an authorization token to a client when it authenticates against Windows Live ID.
You must integrate an application with the Azure Access Control service.

Answer: Answer Area

Action	Requirement
You must distribute an authorization token to a client when it authenticates against Windows Live ID.	Distribute an Identity Provider (IDP) token. Distribute an Access Control Service token. Distribute an Application Programming Interface (API) token.
You must integrate an application with the Azure Access Control service.	Use WS-Trust. Use Kerberos.

You need to recommend the least complex directory synchronization solution. What should you recommend? To answer, drag the appropriate solution to the correct client requirement. Each solution may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content. Select and Place:

Solutions

- Directory Sync (DirSync) with Password Sync
- Directory Sync (DirSync) with single sign-on (SSO)
- Azure Access Control Service

Answer Area

Client requirements	Solution
Customize the user sign-in page.	Solution
Enable users to sign in and access cloud services using	Solution
Ensure user authentications occur in the on-premises Active Directory.	Solution
Control password policies from the on-premises Active Directory.	Solution

Answer:

Solutions

- Directory Sync (DirSync) with Password Sync
- Directory Sync (DirSync) with single sign-on (SSO)
- Azure Access Control Service

Answer Area

Client requirements	Solution
Customize the user sign-in page.	Azure Access Control Service
Enable users to sign in and access cloud services using	Directory Sync (DirSync) with Password Sync
Ensure user authentications occur in the on-premises Active Directory.	Directory Sync (DirSync) with single sign-on (SSO)
Control password policies from the on-premises Active Directory.	Directory Sync (DirSync) with Password Sync

QUESTION 44 You have a web application on Azure. The web application does not employ Secure Sockets Layer (SSL). You need to enable SSL for your production deployment web application on Azure. Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order. Select and Place:

Actions

- Upload the deployment package and certificate.
- Get an SSL certificate from a certification authority (CA).
- Self-sign the SSL certificate.
- Modify the service definition and configuration files.
- Connect to the role instance by using HTTPS.

Answer Area

- Get an SSL certificate from a certification authority (CA).
- Self-sign the SSL certificate.
- Modify the service definition and configuration files.
- Connect to the role instance by using HTTPS.

Answer:

Actions

- Self-sign the SSL certificate.

Answer Area

- Get an SSL certificate from a certification authority (CA).
- Modify the service definition and configuration files.
- Upload the deployment package and certificate.
- Connect to the role instance by using HTTPS.

Explanation:<http://azure.microsoft.com/en-gb/documentation/articles/cloud-services-configure-sslcertificate/> QUESTION 45 You are designing a plan for testing a Windows Azure service. The service runs in the development fabric but fails on Windows Azure. You need to recommend an approach for identifying errors that occur when the service runs on Windows Azure. What should you recommend? A. Attach a debugger to the Windows Azure role instance. B. Analyze debugging information captured by Windows Azure Diagnostics. C. Modify the service configuration for the Windows Azure role to access development storage. D. Analyze debugging information written to the output window of the Windows Azure role instance. Answer: B QUESTION 46 You are designing a Windows Azure web application. The application will be accessible at a standard cloudapp.net URL. You need to recommend a DNS resource record type that will allow you to configure access to the application through a custom domain name. Which type should you recommend? A. AB. CNAME C. MXD. SRV Answer: B QUESTION 47 You are designing a plan to migrate an existing application to Windows Azure. The application currently resides on a server that has 20 GB of hard disk space. You need to recommend the smallest compute instance size that provides local storage equivalent to that of the existing server. Which size should you recommend? A. ExtraSmall B. ExtraLarge C. Small D. Large Answer: A QUESTION 48 An application currently resides on an on-premises virtual machine that has 2 CPU cores, 4 GB of RAM, 20 GB of hard disk space, and a 10 megabit/second network connection. You plan to migrate the application to Azure. You have the following requirements: - You must not make changes to the application. - You must minimize the costs for hosting the application. You need to recommend the appropriate virtual machine instance type. Which virtual machine tier should you recommend? A. Network Optimized (A Series) B. General Purpose Compute, Basic Tier (A Series) C. General Purpose Compute, Standard Tier (A Series) D. Optimized Compute (D Series) Answer: B

Explanation:<http://azure.microsoft.com/en-us/pricing/details/virtual-machines/> QUESTION 49 You are designing an Azure web application that includes many static content files. The application is accessed from locations all over the world by using a custom domain name. You need to recommend an approach for providing access to the static content with the least amount of latency. Which two actions should you recommend? Each correct answer presents part of the solution. A. Place the static content in Azure Table storage. B. Configure a CNAME DNS record for the Azure Content Delivery Network (CDN) domain. C. Place the static content in Azure Blob storage. D. Configure a custom domain name that is an alias for the Azure Storage domain. Answer: B

Explanation:<https://github.com/Azure/azure-content/blob/master/articles/cdn-map-content-to-custom-domain.md> <https://www.simple-talk.com/cloud/development/using-the-windows-azure-content-delivery-network/> QUESTION 50 You are designing an Azure development environment. Team members learn Azure development techniques by training in the development environment. The development environment must auto scale and load balance additional virtual machine (VM) instances. You need to recommend the most cost-effective compute-instance size that allows team members to work with Azure in the development environment. What should you recommend? A. Azure A1 standard VM Instance B. Azure A2 basic VM Instance C. Azure A3 basic VM Instance D. Azure A9 standard VM Instance Answer: A

Explanation:<http://azure.microsoft.com/en-us/pricing/details/virtual-machines/> Braindump2go Latest 70-534 Exam Dumps Released! 100% Real Questions - Dumps Qualification is the secret of Success! Prepare yourself to Face the 70-534 Exam with Real Exam Questions from Microsoft Official Exam Center, walk into the Testing Centre with confidence.
