QUESTION 11 You are a developer at the company xyx. You have been asked to implement a method to safely send data to another machine. What kind of algorithm best fits the requirements? A. Symmetric algorithm B. Asymmetric algorithm C. Hashing algorithm D. X509 Certificate E. None of the above Answer: B

QUESTION 12 You are a developer at the company xyx. You have been asked to implement a method to handle password encryption without offering the possibility to restore the password. What kind of algorithm best fits the requirements? A. Symmetric algorithm B. Asymmetric algorithm C. Hashing algorithm D. X509 Certificate E. None of the above Answer: C

QUESTION 13 Which of the following code snippets will you use to calculate the secure hash of a byte array called userData? If you already have created an algorithm object called sha. A. userData.GetHashCode(sha); B. sha.ComputeHash(userData); C. sha.GetHash(userData); D. sha.EncryptHash(userData); Answer: B

QUESTION 14 Which of the following code snippets will you use to encrypt an array called userData that can be decrypted by anyone logged in on the current machine, and without using any entropy? A. ProtectedData.Protect(userData, null, DataProtectionScope.CurrentUser); B. ProtectedData.Protect(userData, null, DataProtectionScope.LocalMachine); C. ProtectedData.Encrypt(userData, null, DataProtectionScope.CurrentUser); D. ProtectedData.Unprotect(userData, null, DataProtectionScope.LocalMachine); Answer: B

QUESTION 15 You are developing an application that generates code. The application includes the following code segment. (Line numbers are included for reference only.)

```
01 public string GenerateCode(string className, string m
02 {
03
04
05
06 ...
07 }
```

You need to ensure that code generated by the GenerateCode() method represents a class that can be accessed by all objects in its application domain. Which two code segments can you insert at line 05 to achieve this goal? (Each correct answer presents a complete solution. Choose two.)

- A. `ct.Attributes = MemberAttributes.Public;`
- B. `ct.IsStruct = true;`  
`ct.Attributes = MemberAttributes.Public;`
- C. `ct.IsClass = true;`  
`ct.Attributes = MemberAttributes.Public;`
- D. `ct.IsClass = true;`  
`ct.Attributes = MemberAttributes.Private;`

A. Option AB. Option BC. Option CD. Option D Answer: AC

QUESTION 16 You are creating a class named Employee. The class exposes a string property named EmployeeType. The following code segment defines the Employee class. (Line numbers are included for reference only.) The EmployeeType property value must be accessed and modified only by code within the Employee class or within a class derived from the Employee class. You need to ensure that the implementation of the EmployeeType property meets the requirements. Which two actions should you perform? (Each correct answer represents part of the complete solution. Choose two.)

```
01 public class Employee
02 {
03     internal string EmployeeType
04     {
05         get;
06         set;
07     }
08 }
```

A. Replace line 05 with the following code segment:protected get;B. Replace line 06 with the following code segment:private set;C. Replace line 03 with the following code segment:public string EmployeeTypeD. Replace line 05 with the following code segment:private get;E. Replace line 03 with the following code segment:protected string EmployeeTypeF. Replace line 06 with the following code segment:protected set; Answer: AF QUESTION 17You are creating an application that manages information about zoo animals. The application includes a class named Animal and a method named Save. The Save() method must be strongly typed. It must allow only types inherited from the Animal class that uses a constructor that accepts no parameters. You need to implement the Save() method. Which code segment should you use?

```
A. public static void Save<T>(T target) where T : new(), Animal
{
    ...
}

B. public static void Save<T>(T target) where T : Animal
{
    ...
}

C. public static void Save<T>(T target) where T : Animal, new()
{
    ...
}

D. public static void Save(Animal target)
{
    ...
}
```

A. Option AB. Option BC. Option CD. Option D Answer: C QUESTION 18Drag and Drop QuestionYou are developing a class named ExtensionMethods. You need to ensure that the ExtensionMethods class implements the IsUrl() method on string objects. How should you complete the relevant code? (To answer, drag the appropriate code segments to the correct locations in the answer area. Each code segment may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.)

```
public static class ExtensionMethods
public class ExtensionMethods
this String str
String str
protected static class ExtensionMethods
{
    public static bool IsUrl(
    {
        var regex = new Regex(
            "(https?://)?([A-Za-z9-0-]*\\.)?([A-Za-z0-9-]*) +
            "\\.[A-Za-z0-9-]*/*.*");
        return regex.IsMatch(str);
    }
}
```

Answer:
