QUESTION 91 Hotspot Question The designer for the website gave you the following image as the design for the page.

The normal color for the tab is #2da4c2, and the color when the mouse is over the tab is #ffd800. The HTML that implements the navigation tab is as follows.

```
<ul id="nav">  
  <li><a href="/">Home</a></li>  
  <li><a href="/">Contact</a></li>  
</ul>
```

You need to implement the design. What should you do? (To answer, select the appropriate options in the answer area.)

```
Work Area
ul#nav {
  font-size: 1.3em;
  font-weight: 600;
}
ul#nav li {
  float: left;
  background-color: #ffd800;
  background-color: #2da4c2;
  text-decoration: none;
  text-decoration: none;
  list-style: none;
  border-radius: 15px;
  word-wrap: break-word;
  text-align: center;
}
ul#nav li a {
  background-clip: border-box;
  background-color: #2da4c2;
  padding: 10px 15px;
  word-wrap: break-word;
  color: #FFF;
  background-clip: padding-box;
  text-decoration: none;
  background-color: #ffd800;
  float: left;
  border-radius: 12px 12px 0 0;
  padding: 0 12px 0 12px;
  margin: 0 4px 0 4px;
}
ul#nav li a:hover {
  color: #333;
  float: left;
  background-color: #ffd800;
  background-color: #2da4c2;
  list-style: none;
  cursor: pointer;
  background-clip: border-box;
  text-decoration: none;
  background-origin: border-box;
}
```

Answer: QUESTION 92 You need to maximize performance of video delivery. Which code segment should you use as the body of the GetVideoStream function in the Video-Controller class?

```
A MemoryStream stream = new MemoryStream();
new GZipStream(System.IO.File.OpenRead(videoId), CompressionMode.Compress).CopyTo(
stream);
return stream;

B if (Request.ContentEncoding.BodyName == "application/x-gzip")
{
return new GZipStream(System.IO.File.OpenRead(videoId), CompressionMode.Compress);
}

C return new GZipStream(System.IO.File.OpenRead(videoId), CompressionMode.Compress);

D if (Request.Headers["Accept-Encoding"].Contains("gzip"))
{
return new GZipStream(System.IO.File.OpenRead(videoId), CompressionMode.Compress);
}
return System.IO.File.OpenRead(videoId);
```

A. Option AB. Option BC. Option CD. Option D Answer: D QUESTION 93 The transcode.exe utility activates its license online when it is installed. You need to ensure that the registration of the transcode utility is handled as specified in its license. Which method should you add to the TranscodeWorkerRole class?

```

    C A. public override void OnStop()
        {
            RoleEnvironment.Stopping += (sender, args) =>
            {
                var task = Process.Start("transcode.exe", "unregister");
                if (task.HasExited)
                    base.OnStop();
            };
        }

    C B. public override void OnStop()
        {
            RoleEnvironment.Stopping += (sender, args) =>
            {
                Process.Start("transcode.exe", "unregister").WaitForExit();
            };
        }

    C C. public override void OnStop()
        {
            Process.Start("transcode.exe", "unregister");
            base.OnStop();
        }

    C D. public override void OnStop()
        {
            Process.Start("transcode.exe", "unregister").WaitForExit();
            base.OnStop();
        }
    
```

A. Option AB. Option BC. Option CD. Option D Answer: D QUESTION 94 Drag and Drop Question You need to ensure that the transcode.exe utility is installed before the worker role starts. How should you implement the startup task? (To answer, drag the appropriate values to the correct element or attribute. Each value may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.)

Answer:

QUESTION 95 You need to ensure that all customers can delete videos regardless of their browser capability. Which code segment should you use as the body of the SendAsync method in the DeleteHandler class?

```

    C A. var response = base.SendAsync(request, cancellationToken);
        if (request.Headers.Contains("X-Delete"))
        {
            response.Result.StatusCode = HttpStatusCode.NotImplemented;
        }
        return response;

    C B. if (request.Headers.Contains("X-Delete"))
        {
            request.Method = new HttpMethod("DELETE");
        }
        return base.SendAsync(request, cancellationToken);

    C C. var response = base.SendAsync(request, cancellationToken);
        if (response.Result.Headers.Contains("X-Delete"))
        {
            request.Method = new HttpMethod("DELETE");
        }
        return response;

    C D. if (request.Method == HttpMethod.Delete)
        {
            request.Headers.Add("X-Delete", "true");
        }
        return base.SendAsync(request, cancellationToken);
    
```

A. Option AB. Option BC. Option CD. Option D Answer: B QUESTION 96 You need to ensure that developers can connect to a Windows Azure role by using RDP. What should you do? A. Export a certificate without a private key. Upload the .cer file to the Management Certificates section on the Azure Management Portal. B. Export a certificate with a private key. Upload the .pfx file to the Management Certificates section on the Azure Management Portal. C. Export a certificate without a private key. Upload the .cer file to the Certificates section under the TranscodeWorkerRole hosted service on the Azure Management Portal. D. Export a certificate with a private key. Upload the .pfx file to the Certificates section under the TranscodeWorkerRole hosted service on the Azure Management Portal. Answer: D Explanation: In case you don't want to use the RDP certificate created by Windows Azure Tools and want to use a custom certificate instead, the following steps will guide you. These steps can also be used in case package is not being published from Visual Studio rather it is being built locally, saved in either Local Machine's Drive or Windows Azure Blob Storage and subsequently published from there. Here are the steps which are required to get pass the publishing error which you might be running into. You would need to upload the Certificate with Private Key to the portal (when Visual Studio is used this is done in the background). Detailed steps. 1. In Visual Studio, go to the solution which is being developed. 2. Right click the Web Project -> Configure Remote Desktop -> click on View to see Certificate details (Since I don't have a custom certificate I will use one create by Windows Azure Tools itself) 3. Go to Details tab on Certificate -> Click Copy to file.. -> Next -> Select `Yes, export the private key' -> Next -> Continue with default setting and create a password when asked (please refer below screenshots) 4. These steps will generate a .PFX file for this certificate. Now we need to upload this certificate to the portal (for the respective cloud service) 5. Go to the Azure Management Portal -> Go to the Cloud Service in question -> Certificates Tab -> Upload the newly created certificate (.PFX file) Note: * The certificates that you need for a remote desktop connection are different from the certificates that you use for other Azure operations. The remote access certificate must have a private key. * Microsoft Azure uses certificates in three ways: / Management certificates - Stored at the subscription level, these certificates are used to enable the use of the SDK tools, the Windows Azure Tools for Microsoft Visual Studio, or the Service Management REST API Reference. These certificates are independent of any cloud service or deployment. / Service certificates - Stored at the cloud service level, these certificates are used by your deployed services. / SSH Keys - Stored on the Linux virtual machine, SSH keys are used to authenticate remote connections to the virtual machine.

<http://blogs.msdn.com/b/cie/archive/2014/02/22/how-to-use-custom-certificate-for-rdp-to-windows-azure-roles.aspx> QUESTION 97

Drag and Drop Question You need to ensure that the transcode.exe utility is installed before the worker role starts. You have the following markup:

```
<Startup>
  <Task commandLine="msiexec transcode.msi" taskType="Target 1">
    Target 1
  </Task>
  <Task commandLine="msiexec transcode.msi" taskType="Target 2">
    Target 2
  </Task>
  <Task commandLine="msiexec transcode.msi" taskType="Target 3">
    Target 3
  </Task>
  <Task commandLine="msiexec transcode.msi" taskType="Target 4">
    Target 4
  </Task>
  <Task commandLine="msiexec transcode.msi" taskType="Target 5">
    Target 5
  </Task>
</Startup>
```

Which markup segments should you include in Target 1, Target 2, Target 3, Target 4 and Target 5 to implement the startup task? To answer, drag the appropriate markup segments to the correct targets. Each markup segments may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

Markup Segments	Answer Area
Variable	Target 1: Markup Segment
Environment foreground	Target 2: Markup Segment
background	Target 3: Markup Segment
simple	Target 4: Segment
	Target 5: Markup Segment

Answer:

Markup Segments	Answer Area
Variable	Target 1: simple
Environment foreground	Target 2: Environment foreground
background	Target 3: Variable
simple	Target 4: Environment foreground
	Target 5: Environment foreground

Case Study 4 - Cycling Club (QUESTION 98 - QUESTION 104)BackgroundYou are making use of Visual Studio 2012 to create an ASP.NET MVC application to log training information for a cycling club.Business RequirementsThe application needs to host data regarding training dates, distances, and duration. Application users must be able to view and modify data. The application itself should be highly accessible. The application should also allow for times to be presented in the user's native time.Technical RequirementsA public class, named CyclistLog.DataAccess.CyclistLogDb, deals with database access. HTTP GET should be used for all data retrieval. HTTP POST should be used for all data updates.A master layout file, named WiewsShared_Layout.cshtml, is used by all pages in the application.The application makes use of the ModelsLogModel.cs model.The Razor view engine is used for all views in the application. The WiewsCyclingLog includes the _CalculateSpeed.cshtml, EditLog.cshtml, GetLog.cshtml, and InsertLog.cshtml views.The application, however, includes a Wiewsli-lomelindex.cshtml view.The controller included in the application is ControllercyclingLogController.cs. You have also included a timer.png image in the Images folder.When a user examines a cycling log, the users trail map is accessible. This map is configured as a video and an Adobe Flash application. The browser should using H264, Ogg, or WebM formats (in this order) to present the video natively. The Flash application should be used In the event that the video cannot be presented.SecurityThe application should make use of forms authentication, and requires user logon for entering information. The editing or deleting of cyclist information requires a user to be a member of the Admin role. Users must be members of the Admin role to. You need to the application should be defended against cross-site request forgery. The SHA1 algorithm should be used to hash passwords.A custom role provider must be included in CyclistLog.Providers.CyclingLogRoleProvider.cs. QUESTION 98You have been asked to make sure that the edit action of RunLogController is extended. You start by writing the following lines of code:[HttpPost][ActionName("Editlog")]You are required to make use of a specific attribute next.Which of the following is the attribute in question? A. The [ValueProviderCollection] attribute.B. The [ValidateInput] attribute.C. The [ValidateAntiForgeryToken] attribute.D. The [ValidatableObjectAdapter] attribute. Answer: C QUESTION 99You have been tasked with making sure that the application is configured to make use of a custom role provider, named CyclingLogRoleProvider.Which of the following actions should you take? A. You should consider making changes to the machine.config file.B. You should consider making changes to the app.config file.C. You should consider making changes to the web.config file.D. You should consider making changes to the client.config file. Answer: C QUESTION 100You are preparing to write code that prevents invalid parameters from being distributed to the EditLog action. To achieve this, you are required to build the route in a certain way. Whish of the following is a method that should be included in the code? A. You should consider including the MapRoute methodB. You should consider including the IgnoreRoute methodC. You should consider including the GetVirtualPathForArea methodD. You should consider including the ReRoute method Answer: A 70-486 Updated Questions are 2015 Latest Released Which 100% will Meet in Your 70-486 Test!
