

## [2016 Feb-Latest

2016 February NEW ADDED 70-465 Exam Questions & NEW 70-465 Dumps RELEASED Today! Exam Code: 70-465 Exam Name: Designing Database Solutions for Microsoft SQL Server 2012 Certification Provider: Microsoft Corresponding Certifications: MCSE, MCSE: Data Platform 2016 NEW 70-465 Exam Topics: 1.Design a database structure2.Design databases and database objects3.Design database security4.Design a troubleshooting and optimization solution ATTENTION: 2016 NEW ADDED 70-465 Exam Questions are the most IMPORTANT! QUESTION 151What should you create in Azure to support the creation of the backups for DB1? A. an Azure Content Delivery Network (CDN) endpointB. a Service Bus namespaceC. a storage accountD. a cloud service Answer: C QUESTION 152Which feature should you enable and configure so session requests addressed to a specific instance can be allocated to different processor resources based on session request properties? A. Resource GovernorB. Windows System Resource ManagerC. Processor affinityD. I/O affinity Answer: C QUESTION 153You are designing two stored procedures named Procedure1 and Procedure2. You identify the following requirements:- Procedure1 must take a parameter that ensures that multiple rows of data can pass into the stored procedure.- Procedure2 must use business logic that resides in a Microsoft .NET Framework assembly.You need to identify the appropriate technology for each stored procedure. Which technologies should you identify? To answer, drag the appropriate technology to the correct stored procedure in the answer area. (Answer choices may be used once, more than once, or not at all.)

Explanation:<http://msdn.microsoft.com/en-us/library/ms131102.aspx><http://msdn.microsoft.com/en-us/library/bb522446.aspx><http://msdn.microsoft.com/en-us/library/bb510489.aspx> QUESTION 154You are using dynamic management views to monitor an SQL Server server named SQL1.A database administrator named Dba1 must monitor the health of SQL1.You need to ensure that Dba1 can access dynamic management views for SQL1. The solution must use the principle of least privilege.Which permissions should you assign to Dba1? A. VIEW ANY DEFINITIONB. VIEW SERVER STATEC. VIEW DEFINITIOND. CONTROL SERVER Answer: BExplanation: To query a dynamic management view or function requires SELECT permission on object and VIEW SERVER STATE or VIEW DATABASE STATE permission.

<https://msdn.microsoft.com/en-us/library/ms188754.aspx> QUESTION 155You have a customer who has several SQL Server 2012 database servers.You are designing a data warehouse for the customer. The data warehouse will use columnstore indexes.The customer identifies that the following must be supported for the column store indexes.- Data manipulation language (DML) statements- Nonclustered columnstore indexes- Clustered columnstore indexes- PartitioningYou need to identify which technology requires the customer to implement an SQL Server 2014 database.What should you identify? A. clustered columnstore indexesB. nonclustered columnstore indexesC. data manipulation language (DML) statementsD. partitioning Answer: AExplanation:SQL Server 2014 has the features of SQL Server 2012 plus updateable clustered columnstore indexes. This feature is required here as DML statements must be supported in the warehouse.[https://msdn.microsoft.com/en-us/library/gg492088\(v=sql.120\).aspx](https://msdn.microsoft.com/en-us/library/gg492088(v=sql.120).aspx)

QUESTION 156Drag and Drop QuestionYou need to assign security to dev\_role1.How should you complete the code? To answer, drag the appropriate elements to the correct locations. Each element may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

Answer:

QUESTION 157 Drag and Drop Question You have an SQL Server 2014 server. You plan to create four stored procedures that will use transactions. The stored procedures will be configured as shown in the following table.

Stored procedure name	Concurrency strategy
SP1	A transaction will only recognize data changes made before the start of the transaction. Other transactions are allowed to modify data.
SP2	A transaction can only read data made by another transaction that has been committed.
SP3	A transaction can only read data made by another transaction that has been committed.
SP4	During a transaction, no other transactions can modify data.

You need to recommend an isolation level for each stored procedure. The solution must support the concurrency strategy of each stored procedure and must minimize locks. What should you recommend? To answer, drag the appropriate isolation levels to the correct stored procedures. Each isolation level may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

QUESTION 158 Drag and Drop Question You have a database named DB1. DB1 contains a table named Sales.SalesPerson that has an index named AK\_SalesPerson\_rowguid. Queries that do not use the index take approximately 10 times longer to complete than queries that use the index. You discover that AK\_SalesPerson\_rowguid has severe fragmentation. You need to recommend a solution to defragment the index. The solution must ensure that the index can be used by queries during the defragmentation. What statement should you use? To answer, drag the appropriate elements to the correct locations. Each element may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

QUESTION 159 Drag and Drop Question You define a table by using the following statement.

```
CREATE TABLE School.dbo.Teacher
(
    ID INT PRIMARY KEY,
    Teacher XML
)
```

The Teachers table contains one million records. A sample record of the XML data output is as follows:

```
<teacher>
  <id>12345</id>
  <name>Elementary Teacher</name>
  <grade>5</grade>
  <subjects>
    <subject>English</subject>
    <subject>Math</subject>
  </subjects>
</teacher>
```

You plan to create queries against the table based on grade. You need to recommend which indexes should be applied to the XML fields. The solution must meet the following requirements:- Reduce the amount of time required to query the table based on grade.- Minimize the size of the index. What should you recommend? To answer, drag the appropriate index types to the correct fields. Each index type may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

QUESTION 160 You are designing a Windows Azure SQL Database for an order fulfillment system. You create a table named Sales.Orders with the following script.

```
CREATE TABLE Sales.Orders
(
  OrderID int IDENTITY(1,1) NOT NULL PRIMARY KEY,
  Status varchar(50) NOT NULL,
  CustomerID int NOT NULL
);
```

Each order is tracked by using one of the following statuses:- Fulfilled- Shipped- Ordered- Received You need to design the database to ensure that that you can retrieve the following information:- The current status of an order- The previous status of an order.- The date when the status changed.- The solution must minimize storage. More than one answer choice may achieve the goal. Select the BEST answer. A. To the Sales.Orders table, add three columns named Status, PreviousStatus and ChangeDate. Update rows as the order status changes. B. Create a new table named Sales.OrderStatus that contains three columns named OrderID, StatusDate, and Status. Insert new rows into the table as the order status changes. C. Implement change data capture on the Sales.Orders table. D. To the Sales.Orders table, add three columns named FulfilledDate, ShippedDate, and ReceivedDate. Update the value of each column from null to the appropriate date as the order status changes. Answer: B 2016 February NEW ADDED
