You administer a single server that contains a Microsoft SQL Server 2012 default instance on which several production databases have been deployed. You plan to install a new ticketing application that requires the deployment of a database on the server. The SQL login for this application requires sysadmin permissions. You need to ensure that the login for the ticketing application cannot access other production databases. What should you do? A. Use the SQL Server default instance and enable Contained Databases. B. Use the SQL Server default instance and configure a user-defined server role. Add the login for the ticketing application to this role. C. Install a new named SQL Server instance on the server. D. Install a new default SQL Server instance on the server.

Answer: C QUESTION 61 You administer a Microsoft SQL Server 2012 failover cluster that contains two nodes named Node A and Node B. A single instance of SQL Server is installed on the cluster. An additional node named Node C has been added to the existing cluster. You need to ensure that the SQL Server instance can use all nodes of the cluster. What should you do? A. Create a ConfigurationFile.ini file from Node B, and then run the AddNode command-line tool on Node A. B. Use Node A to install SQL Server on Node C. C. Run the Add Node to SQL Server Failover Cluster Wizard on Node C. D. Use Cluster Administrator to add a new Resource Group to Node B. Answer: C QUESTION 62 You administer a Microsoft SQL Server 2012 database.
