https://1drv.ms/f/s!AvI7wzKf6QBjgnOB-kd6_T9I1enu QUESTION 11 Your network contains an Active Directory domain named contoso.com. The domain contains 1,000 client computers that run Windows 10. A security audit reveals that the network recently experienced a Pass-the-Hash attack. The attack was initiated from a client computer and accessed Active Directory objects restricted to the members of the Domain Admins group. You need to minimize the impact of another successful Pass-the-Hash attack on the domain. What should you recommend? A. Instruct all users to sign in to a client computer by using a Microsoft account. B. Move the computer accounts of all the client computers to a new organizational unit (OU). Remove the permissions to the new OU from the Domain Admins group. C. Instruct all administrators to use a local Administrators account when they sign in to a client computer. D. Move the computer accounts of the domain controllers to a new organizational unit (OU). Remove the permissions to the new OU from the Domain Admins group. Answer: A QUESTION 12 Note: This question is part of a series of questions that use the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the scenario is exactly the same in each question in this series. Start of repeated scenario Your network contains an Active Directory domain named contoso.com. The functional level of the forest and the domain is Windows Server 2008 R2. The domain contains the servers configured as shown in the following table.

Server name	Configuration
Nano1	Nano Server
Nano2	Nano Server
Server2	File server that has a shared folder named DATA
Server3	adatum.com
Server4	Hyper-V host
Server1	Application server

All servers run Windows Server 2016. All client computers run Windows 10. You have an organizational unit (OU) named Marketing that contains the computers in the marketing department. You have an OU named finance that contains the computers in the finance department. You have an OU named AppServers that contains application servers. A Group Policy object (GPO) named GP1 is linked to the Marketing OU. A GPO named GP2 is linked to the AppServers OU. You install Windows Defender on Nano1. End of repeated scenario You need to exclude D:\Folder1 on Nano1 from being scanned by Windows Defender. Which cmdlet should you run? A. Set-StorageSetting B. Set-FsrmFileScreenException C. Set-MpPreference D. Set-DtcAdvancedSetting Answer: A QUESTION 13 Note: This question is part of a series of questions that use the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the scenario is exactly the same in each question in this series. Start of repeated scenario Your network contains an Active Directory domain named contoso.com. The functional level of the forest and the domain is Windows Server 2008 R2. The domain contains the servers configured as shown in the following table.

Server name	Configuration
Nano1	Nano Server
Nano2	Nano Server
Server2	File server that has a shared folder named DATA
Server3	adatum.com
Server4	Hyper-V host
Server1	Application server

All servers run Windows Server 2016. All client computers run Windows 10. You have an organizational unit (OU) named Marketing that contains the computers in the marketing department. You have an OU named Finance that contains the computers in the finance department. You have an OU named AppServers that contains application servers. A Group Policy object (GPO) named GP1 is linked to the Marketing OU. A GPO named GP2 is linked to the AppServers OU. You install Windows Defender on Nano1. End of repeated scenario You need to ensure that the marketing department computers validate DNS responses from adatum.com. Which setting should you configure in the Computer Configuration node of GP1? A. TCP/IP Settings from Administrative Templates B. Connection Security Rule from Windows Settings C. DNS Client from Administrative Templates D. Name Resolution Policy from Windows Settings Answer: D QUESTION 14 Note: This question is part of a series of questions that use the

same or similar answer choices. An answer choice may be correct for more than one question In the series. Each question is Independent of the other questions In this series. Information and details provided in a question apply only to that question. Your network contains an Active Directory domain named contoso.com. The domain contains a server named Server1 that runs Windows Server 2016 and a Nano Server named Nano1. Nano1 has two volumes named C and D. You are signed in to Server1. You need to configure Data Deduplication on Nano1. Which tool should you use? A. File Explorer B. Shared Folders C. Server Manager D. Disk Management E. Storage Explorer F. Computer Management G. System Configuration H. File Server Resource Manager (FSRM) Answer: A QUESTION 15 Note: This question is part of a series of questions that present the same scenario. Each question In the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution. After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen. Your network contains an Active Directory domain named contoso.com. The domain contains a computer named Computer1 that runs Windows 10. Computer1 connects to a home network and a corporate network. The corporate network uses the 172.16.0.0/24 address space internally. Computer1 runs an application named App1 that listens to port 8080. You need to prevent connections to App1 when Computer1 is connected to the home network. Solution: From Group Policy Management you create a software restriction policy. Does this meet the goal? A. Yes B. No Answer: A QUESTION 16 Your network contains an Active Directory domain named contoso.com. The domain contains five file servers that run Windows Server 2016. You have an organizational unit (OU) named Finance that contains all of the servers. You create a Group Policy object (GPO) and link the GPO to the Finance OU. You need to ensure that when a user in the finance department deletes a file from a file server, the event is logged. The solution must log only users who have a manager attribute of Ben Smith. Which audit policy setting should you configure in the GPO? A. File system in Global Object Access Auditing B. Audit Detailed File Share C. Audit Other Account Logon Events D. Audit File System in Object Access Answer: C QUESTION 17 Note: This question is part of a series of questions that present the same scenario. Each question In the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution. After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen. Your network contains an Active Directory domain named contoso.com. The domain contains multiple Hyper-V hosts. You need to deploy several critical line-of-business applications to the network to meet the following requirements: - The resources of the applications must be isolated from the physical host - Each application must be prevented from accessing the resources of the other applications. - The configurations of the applications must be accessible only from the operating system that hosts the application. Solution: You deploy one Windows container to host all of the applications. Does this meet the goal? A. Yes B. No Answer: A QUESTION 18 Note: This question is part of a series of questions that use the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the scenario is exactly the same in each question in this series. Start of repeated scenario Your network contains an Active Directory domain named contoso.com. The functional level of the forest and the domain is Windows Server 2008 R2. The domain contains the servers configured as shown in the following table.

Server name	Configuration
Nano1	Nano Server
Nano2	Nano Server
Server2	File server that has a shared folder named DATA
Server3	adatum.com
Server4	Hyper-V host
Server1	Application server

All servers run Windows Server 2016. All client computers run Windows 10. You have an organizational unit (OU) named Marketing that contains the computers in the marketing department. You have an OU named Finance that contains the computers in the finance department. You have an OU named AppServers that contains application servers. A Group Policy object (GPO) named GP1 is linked to the Marketing OU. A GPO named GP2 is linked to the AppServers OU. You install Windows Defender on Nano1. End of repeated scenario You plan to implement BitLocker Drive Encryption (BitLocker) on the operating system volumes of the application servers. You need to ensure that the BitLocker recovery keys are stored in Active Directory. Which Group Policy setting should you configure? A. System cryptography; Force strong key protection (or user keys stored on the computer) B. Store BitLocker recovery information in Active Directory Domain Services (Windows Server 2008 and Windows Vista) C. System cryptography; Use FIPS compliant algorithms for encryption, hashing and signing D. Choose how BitLocker-protected operating system drives can be recovered Answer: C QUESTION 19 Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have

more than one correct solution, while others might not have a correct solution. After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen. Your network contains an Active Directory domain named contoso.com. All servers run Windows Server 2016. All client computers run Windows 10. The relevant objects in the domain are configured as shown in the following table.

Server name	Object	Organizational unit (OU) name
Server1	Computer account	Administration
User1	User account	Operations Users

You need to assign User1 the right to restore files and folders on Server1, and Server2. Solution: You add User1 to the Backup Operators group in contoso.com. Does this meet the goal? A. Yes B. No Answer: A QUESTION 20 Your network contains an Active Directory domain named contoso.com. The domain contains a server named Server1 that runs Windows Server 2016. You have an organizational unit (OU) named Administration that contains the computer account of Server1. You import the Active Directory module to Server1. You create a Group Policy object (GPO) named GPO1. You link GPO1 to the Administration OU. You need to log an event each time an Active Directory cmdlet is executed successfully from Server1. What should you do? A. From Advanced Audit Policy in GPO1 configure auditing for directory service changes. B. Run the (Get-Module ActiveDirectory).LogPipelineExecutionDetails - \$false command. C. Run the (Get-Module ActiveDirectory).LogPipelineExecutionDetails = \$true command. D. From Advanced Audit Policy in GPO1 configure auditing for other privilege use events. Answer: C !!!RECOMMEND!!! 1. | 2017 Version 70-744 Exam Dumps (PDF & VCE) 65 Q&As Download: <http://www.braindump2go.com/70-744.html> 2. | 2017 Version 70-744 Study Guide Video: YouTube Video: [YouTube.com/watch?v=Bde3j-1uaIg](https://www.youtube.com/watch?v=Bde3j-1uaIg)
