Which statement about the join process of the access point is true?

A. The AP failed to join because the self-signed certificate of the AP was not correct on the controller. B. The time on the controller is outside of the certificates validity time interval so the join phase failed. C. The AP moved from this controller to its primary controller. D. The AP successfully joined the controller. Answer: B QUESTION 23A Wireless LAN Cisco engineer is troubleshooting 802.11ac WLAN at customer site Doe to interferences with neighboring 802.11n networks the engineer must determine the current primary secondary channel allocation to enhance the current configuration. Channel 60 has been chosen by the customer as primary 20 MHz channel. Which combination determines the resulting primary 40 MHz and primary 80 MHz channels? A. primary 40 MHz channel 62, primary 80 MHz: channel 58B. primary 40 MHz channel 54, primary 80 MHz channel 58C. primary 40 MHz channel 64, primary 80 MHz channel 60D. primary 40 MHz channel 60, primary 80 MHz channel 56 Answer: A QUESTION 24A wireless engineer has completed the configuration of a new WLAN on the existing Cisco wireless infrastructure. During testing he found that the wireless client's authenticates and received the correct ip address from the switch, but they were not able to access any of the internal or external resources. Which action will resolve the issue? A. Configure static ip addresses for the wireless clients. B. Configure the default-router on the switch DHCP pool. C. Configure option 82 on the switch DHCP pool. D. Configure a dns-server on the switch DHCP pool. Answer: C QUESTION 25Which channel width is the maximum that can be obtained by bonding two 802.11 ac subchannels according to US regulations? A. 160 MHzB. 120 MHzC. 84 MHz D. 240 MHz Answer: A QUESTION 26Which statement about the usage of the debug command in a Cisco Unified Wireless Network is true? A. Debug is enabled until manual shut off. B. Debug is a message logging severity 7. C. Debug is a restricted command and is not available in the AP CLI. D. Debug is available on the WLC serial console and web interface. Answer: B QUESTION 27Two 5508 Wireless Lan Controllers are managing all Access Points throughout the network The WLCs are located in different locations to provide geographical redundancy A Mobility Group has been configured on both WLCs and has a UP status on both Controllers The APs in location A are statically configured to use Controller A as the Primary and Controller B as the Secondary If the WLC in location A goes offline, the APs successfully join the WLC in location B but they do not failover to their Primary configured Controller. What configuration task will fix this issue? A. Change the AP Failover Priority to critical. B. Enable AP Fallback globally on the WLC. C. Configure the WLC in location A as Primary using the CAPWAP AP Controller IP Address command on all the location A Access Points. D. Use DHCP Option 43 and specify WLC in location A as Primary. Answer: C QUESTION 28Refer to the exhibit. A mobile station in a factory contains an AP configured as a work group bridge that authenticates to a root AP using EAP-FAST. To be able to use the mobile station in further parts of the factory, another root AP is installed and also configured for EAP-FAST When the mobile station is attempting to roam to the other AP, it loses connection yet can still authenticate to the first one. What is the cause for the failed authentication on RAP2?

A. RAP1 is using a different authentication protocol than RAP2. B. RAP2 has a different SSID than RAP1. C. RAP1 is using a
