Each correct answer presents part of the solution.
A. Forms Engine
B. Cache
C. Data Access Layer
D. Interaction Layer
Answer: A
Explanation: We can also connect through the user interface interaction layer, and we also have the forms engine. It's important to note that there's no longer a hard client involved in the server architecture as the form engines and interaction layer are designed to generate Web pages accessible on any Internet browser.
QUESTION 35 You are developing a Fleet management module for Microsoft Dynamics 365 Finance and Operations. You create an FMVehicle table to store information that is specific to each vehicle in your fleet. Now, you need to create a form that allows users to view and edit all of the information related to a vehicle. Which form pattern should you use to accomplish this goal?
A. Workspace Operational
B. List Page
C. Dialog - Basic
D. Details Master
Answer: D
Explanation: Operational workspace: This is the standard pattern currently used for workspace development. Because of the set of components that are permitted in it, this pattern has superior performance over the deprecated "workspace" pattern. For this reason and to ensure visual and behavioral consistency with the other workspaces in the system, we recommend that you use this pattern.
List Page: A list page presents a set of data on a user interface that is optimized so that you can browse records, find the right record, and then take an action upon that record. The list page lets the user search, filter, and sort the data. FactBoxes on the right side of the grid show related data for the active record. Actions that are relevant to the record are located on the Action Pane at the top of the page. The use of this pattern is now discouraged when there is a 1:1 correspondence between the List Page and Details page. Current guidance is to use this pattern only in other situations, such as when list pages have no backing details pages or have multiple backing details page (for example, when project quotations and sales quotations are shown together in the same List Page).
Detail Master: A details form is the primary method for entering data. These forms let the user view, edit, and act upon data. All content on these form types is structured into FastTabs that can be expanded and collapsed, so that multiple FastTabs can be open at the same time. The FastTabs can contain fields or a grid, and each FastTab can have a local toolbar. This is the basic Detail Master pattern. This is the pattern that you should use by default.
QUESTION 36 You are an administrator of a Microsoft Dynamics 365 for Finance and Operations - Retail live environment. You receive a report that the corporate Retail server is unresponsive. Where should you look first to troubleshoot the issue in the most efficient manner possible?
A. Environment Monitoring in Lifecycle Services (LCS)
B. Event Viewer of the Retail Server
C. Activity Log in Azure Portal
D. Event Viewer of the Application Object Server (AOS)
Answer: B
Explanation: Retail Server, Modern POS, and hardware station are logged in the Event viewer on the local machine.
QUESTION 37 Employees who use a Cloud point-of-sale (POS) at a store report that the product information is not current. There is no Retail Store Scale Unit deployed at the store, and you suspect that the scheduler job that updates product information has failed. Which two actions can you take to check the status of the scheduler job? Each correct answer presents a complete solution.
A. In Event Viewer, look at the Commerce-RetailServer event log for an event that references the job.
B. In Lifecycle Services (LCS), look in Environment monitoring, and search Activity for the batch job that includes the scheduler job.
C. In Retail Headquarters, look at the history of the distribution schedule that includes the scheduler job.
D. In the Cloud POS, look at the Database connection status screen for the job.
Answer: B
Explanation: Retail distribution jobs uses the commerce data exchange async server and the retail scheduler. The components of messages, environments, and jobs are all collected and surfaced up to LCS to provide a one-stop overview of diagnostics and monitoring.
QUESTION 38 You finish developing a model named CompletedModel1 that contains objects. Which three items from the model must be included to build the CompletedModel1 model during the package build on the build server? Each correct answer presents part of the solution.
A. CompletedModel1 build result file
B. Metadata of objects in CompletedModel1
C. Source code of objects in CompletedModel1
D. Visual Studio solution file
E. CompletedModel1 descriptor file
Answer: B
Explanation: A Dynamics AX package is a deployment and compilation unit of one or more models. It includes model metadata, binaries, cubes and other associated resources. One or more AX packages can be packaged into a deployment package, which is the vehicle used for deployment on UAT and production environments. Packages are packaged into a deployable package file for deployment to Sandbox or production environments.
QUESTION 39 You are working in a Microsoft Dynamics 365 for Retail environment and need to develop an app that can be installed on a tablet to calculate the sales total with tax

for a given list of items. The app must work if the tablet loses wireless connectivity. Which type of interface should you use to develop the app?
A. Cloud POS
B. User Interface
C. eCommerce
D. Modern POS
Answer: D
Explanation: Users of Retail Modern Point of Sale (POS) can perform various retail tasks on supported laptops, tablets, and phones. These tasks include processing sales transactions, viewing customer orders, managing daily operations and inventory, and viewing role-based reports.

QUESTION 40
You are working for a client in a new Microsoft Dynamics 365 for Finance and Operations environment. The client requests that custom fields be added to the SalesTable table. You need to add them in a way to minimize the cost of maintenance and upgrading. What should you do to add the custom fields?
A. Create a new package in the ApplicationSuite model.
B. Create a new model that overlays the ApplicationSuite model.
C. Create a new extension model that references the ApplicationSuite model.
D. Create a new project in the ApplicationSuite model.
Answer: C
Explanation: Microsoft's best practice recommendation is to use extension objects and models wherever we can.!!!RECOMMEND!!!
