1 - Litware IncBackgroundYou are a developer for Litware Inc., a SaaS company that provides a solution for managing employee
expenses. The solution consists of an ASP.NET Core Web API project that is deployed as an Azure Web App.Overall architecture
Employees upload receipts for the system to process. When processing is complete, the employee receives a summary report email
that details the processing results. Employees then use a web application to manager their receipts and perform any additional tasks
needed for reimbursement.Receipt processingEmployees may upload receipts in two ways: Uploading using an Azure Files
mounted folder Uploading using the web applicationData StorageReceipt and employee information is stored in an Azure SQL
database.DocumentationEmployees are provided with a getting started document when they first use the solution. The
documentation includes details on supported operating systems for Azure File upload, and instructions on how to configure the
mounted folder.Solution detailsUsers table

Column

Description

Column	Description
Userld	unique identifier for and employee
Expense Againsty	I include the street a account number in the format 12°4 123,1234
АножецАнтоции	minim Or anowed expenses being approved is needed
Supervisorld	unique identifier for employee's supervisor
SecurityPin	value used to validate user identity

Web Application You enable MSI for the Web App and configure the Web App to use the security principal name. Processing Processing is performed by an Azure Function that uses version 2 of the Azure Function runtime. Once processing is completed, results are stored in Azure Blob Storage and an Azure SQL database. Then, an email summary is sent to the user with a link to the processing report. The link to the report must remain valid if the email is forwarded to another user. Requirements Receipt processing Concurrent processing of a receipt must be prevented. Logging Azure Application Insights is used for telemetry and logging in both the processor and the web application. The processor also has TraceWriter logging enabled. Application Insights must always contain all log messages. Disaster recovery Regional outage must not impact application availability. All DR operations must not be dependent on application running and must ensure that data in the DR region is up to date. Security Users' SecurityPin must be stored in such a way that access to the database does not allow the viewing of SecurityPins. The web application is the only system that should have access to SecurityPins. All certificates and secrets used to secure data must be stored in Azure Key Vault. You must adhere to the Least Privilege Principal. All access to Azure Storage and Azure SQL database must use the application's Managed Service Identity (MSI) Receipt data must always be encrypted at rest. All data must be protected in transit. User's expense account number must be visible only to logged in users. All other views of the expense account number should include only the last segment with the remaining parts obscured. In the case of a security breach, access to all summary reports must be revoked without impacting other parts of the system. Issues Upload format issue Employees occasionally report an issue with uploading a receipt using the web application. They report that when they upload a receipt using the Azure File Share, the receipt does not appear in their profile. When this occurs, they delete the file in the file share and use the web application, which returns a 500 Internal Server error page. Capacity issueDuring busy periods, employees report long delays between the time they upload the receipt and when it appears in the web application.Log capacity issueDevelopers report that the number of log messages in the trace output for the processor is too high, resulting in lost log messages. Hotspot QuestionYou need to ensure that security requirements are met.What value should be used for the ConnectionString field on line DB03 in the Database class? To answer, select the appropriate options in the answer area.NOTE: Each correct selection is worth one point.

Explanation:Box 1: Integrated Security=SSPIIntegrated security: For all data source types, connect using the current user account. For SqlClient you can use Integrated Security=true; or Integrated Security=SSPI;Scenario: All access to Azure Storage and Azure SQL database must use the application's Managed Service Identity (MSI)Box 2: Encrypt = TrueScenario: All data must be protected in transit.References:https://docs.microsoft.com/en-us/dotnet/framework/data/adonet/connection-string-syntax !!!RECOMMEND!!!1.|2019 Latest AZ-202 Exam Dumps (PDF & VCE) 65Q&As Instant Download:https://www.braindump2go.com/az-202.html2.|2019 Latest AZ-202 Study Guide Video Instant Download: YouTube Video: YouTube.com/watch?v=DV83EMNjaDA
