QUESTION 24Drag and Drop QuestionYou have a Lync Server 2013 infrastructure and a Microsoft Exchange Server 2010 Service Pack 2 (SP2) organization. All users are enabled for Enterprise Voice and Unified Messaging (UM). Lync Server and Exchange Server are configured to use DTMF only. Your company owns a phone number range of 1 (425) 555-5001 to 1 (425) 555-5999. You have normalization rules that transform four- digit and 10-digit numbers. You need to ensure that when callers call the company's main phone number, the following occurs:- If a caller dials 0, the call is transferred to the receptionist. If a caller dials 1, the call is transferred to extension number 5001. - If a caller waits on the line without dialing a number, the call is automatically transferred to the receptionist. Which settings should you configure? To answer, drag the appropriate settings to the correct caller actions in the answer area. Each setting may be used once, more than once, or not at all. Additionally, you may need to drag the split bar between panes or scroll to view content.

You need to enable Microsoft Lync Online to meet the following requirements:- Users must use the same credentials for on-premises Exchange Server and Office 365. - Users must be able to invite other company users to online meetings by using Microsoft Outlook 2010. What should you deploy? To answer, drag the appropriate technology to the correct requirement in the answer area. Each technology may be used once, more than once, or not at all. Additionally, you may need to drag the split bar between panes or scroll to view content.

Answer:

Explanation:Note:- Active Directory Federation Services (AD FS) 2.0 helps simplify access to applications and other systems with an open and interoperable claims-based model.- ADFS or Active directory Federation Service is to deploy a new AD FS 2.0 infrastructure to provide your Active Directory users, who are logged on to computers located physically on the corporate network or that are logged on remotely to the corporate network, with single sign-on access to Office 365 services using their corporate

domain credentials. Once you have deployed your AD FS 2.0 production environment on-premises, you will need to establish a relying party trust relationship between the AD FS 2.0 federation server farm and Office 365. This relying party trust acts as a secure channel where authentication tokens can safely pass between your organization and Office 365 in order to facilitate single sign-on access to Office 365.- The Microsoft Online Services Directory Synchronization tool is an application that runs Active Directory synchronization for Microsoft Office 365 for enterprises. An administrator should install this tool and run it on only one computer on your company's local network.- With the Microsoft Conferencing Add-in for Microsoft Office Outlook, you can do the following without leaving the Office Outlook messaging and collaboration client:Schedule a meeting in the same way that you book a conference room and invite attendees to other meetings.Set Live Meeting service Meeting OptionsSchedule a conference call Braindump2go is one of the Leading 70-337 Exam Preparation Material Providers Around the World!
