**QUESTION 71**You administer an Azure Web Site named contoso. The development team has implemented changes to the website that need to be validated.You need to validate and deploy the changes with minimum downtime to users.What should you do first? A. Create a new Linked Resource.B. Configure Remote Debugging on contoso.C. Create a new website named contosoStaging.D. Create a deployment slot named contosoStaging.E. Back up the contoso website to a deployment slot.  
Answer: DExplanation:When you deploy your application to Azure Websites, you can deploy to a separate deployment slot instead of the default production slot, which are actually live sites with their own hostnames.Furthermore, you can swap the sites and site configurations between two deployment slots, including the production slot. Deploying your application to a deployment slot has the following benefits:\* You can validate website changes in a staging deployment slot before swapping it with the production slot.\* After a swap, the slot with previously staged site now has the previous production site. If the changes swapped into the production slot are not as you expected, you can perform the same swap immediately to get your "last known good site" back.\* Deploying a site to a slot first and swapping it into production ensures that all instances of the slot are warmed up before being swapped into production. This eliminates downtime when you deploy your site. The traffic redirection is seamless, and no requests are dropped as a result of swap operations. **QUESTION 72**You manage an Azure Web Site that is running in Shared mode.You discover that the website is experiencing increased average response time during periods of heavy user activity.You need to update the website configuration to address the performance issues as they occur.What should you do? A. Set the website to Standard mode and configure automatic scaling based on CPU utilization.B. Configure automatic seating during specific dates.C. Modify the website instance size.D. Configure automatic scaling based on memory utilization.E. Set the website to Basic mode and configure automatic scaling based on CPU utilization. Answer: AExplanation:Scaling to Standard Plan ModeSelecting Standard expands the Capacity section to reveal the Instance Size and Instance Count options, which are also available in Basic mode. The Edit Scale Settings for Schedule and Scale by Metric options are available only in Standard mode.

Note:\* For increased performance and throughput for your websites on Microsoft Azure, you can use the Azure Management Portal

to scale your Web Hosting Plan mode from Free to Shared, Basic, or Standard.\* There are 2 options for scaling:Based on a Schedule Based on CPU usage QUESTION 73 Drag and Drop Question You manage an Azure Web Site in Standard mode at the following address: contoso.azurewebsites.net. Your company has a new domain for the site that needs to be accessible by Secure Socket Layer (SSL) encryption. You need to be able to add a custom domain to the Azure Web Site and assign an SSL certificate. Which three steps should you perform next in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order. More than one order of answer choices may be correct You will receive credit for any of the correct

**Actions**

- Create a CNAME record from www.contoso.com to contoso.azurewebsites.net.
- Add www.contoso.com to the list of domain names as a custom domain.
- Add an A record in your DNS for www.contoso.com to point to the Azure Web Site IP.
- Add SSL binding for the www.contoso.com domain with the IP-based SSL option selected.
- Add SSL binding for the www.contoso.com domain with the Server Name Indication (SNI) SSL option selected.
- Create a new file that will redirect the site to the new URL and upload it to the Azure Web Site.

**Answer Area**

Answer:

**Actions**

- Create a CNAME record from www.contoso.com to contoso.azurewebsites.net.
- Add www.contoso.com to the list of domain names as a custom domain.
- Add an A record in your DNS for www.contoso.com to point to the Azure Web Site IP.
- Add SSL binding for the www.contoso.com domain with the IP-based SSL option selected.
- Add SSL binding for the www.contoso.com domain with the Server Name Indication (SNI) SSL option selected.
- Create a new file that will redirect the site to the new URL and upload it to the Azure Web Site.

**Answer Area**

- Create a CNAME record from www.contoso.com to contoso.azurewebsites.net.
- Create a new file that will redirect the site to the new URL and upload it to the Azure Web Site.
- Add SSL binding for the www.contoso.com domain with the IP-based SSL option selected.

QUESTION 74 You manage an Azure Web Site named contosoweb. Logging is enabled for contosoweb. You need to view only errors from your log files in a continuous stream as they occur. Which Windows Power Shell command should you execute? A. Get-AzureWebSiteLog -Name contosoweb -OutBuffer Error B. Save-AzureWebSiteLog -Name contosoweb -Output Errors C. Get-AzureWebSiteLog -Name contosoweb -Tail -Message Error D. Get-Azure WebSiteLog -Name contosoweb -Message Error

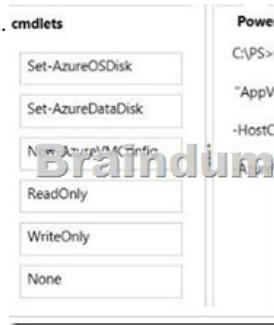

Answer: C Explanation: This example starts log streaming and show error logs only. Windows PowerShell

C:PS>Get-AzureWebsiteLog -Tail -Message Error <http://msdn.microsoft.com/en-us/library/dn495187.aspx> QUESTION 75 You administer a solution deployed to a virtual machine (VM) in Azure. The VM hosts a web service that is used by several applications. You are located in the US West region and have a worldwide user base. Developers in Asia report that they experience significant delays when they execute the services. You need to verify application performance from different locations. Which type of monitoring should you configure? A. Disk Read B. Endpoint C. Network Out D. CPU E. Average Response Time Answer: E

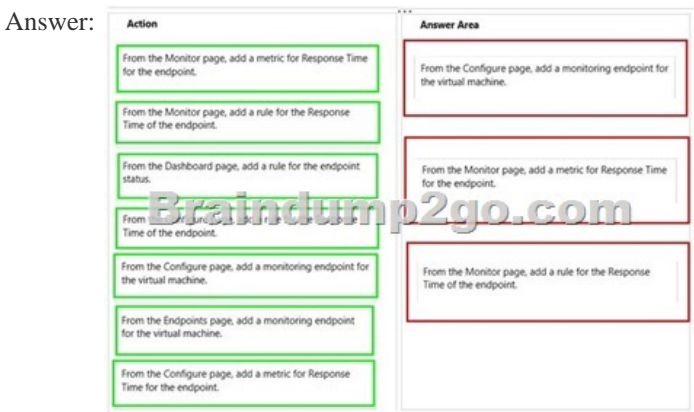

Explanation: Example: Incorrect: Not B: Health Endpoint Monitoring Pattern is used for checking the health of the program: Implement functional checks within an application that external tools can access through exposed endpoints at regular intervals. This pattern can help to verify that applications and services are performing correctly. QUESTION 76 You are the administrator for three Azure subscriptions named Dev, Test, and Prod. Your Azure Power Shell profile is configured with the Dev subscription as the default. You need to create a new virtual machine in the Test subscription by using the least administrative effort. Which Power Shell command should you use?  A. PS C:\> Select-AzureSubscription -SubscriptionName "Test"

- B. PS C:\> Set-AzureSubscription -SubscriptionName "Test" -CurrentStorageAccountName "teststorage"
- C. PS C:\> Set-AzureSubscription "Test" -CurrentStorageAccountName "teststorage"
- D. PS C:\> Select-AzureSubscription -SubscriptionName "Test" -Default

A. Option AB. Option BC. Option CD. Option D Answer: AExplanation:Example: Set the current subscription This command makes "ContosoEngineering" the current subscription.Windows PowerShellC:PS> Select-AzureSubscription -SubscriptionName ContosoEngineering -Current<http://msdn.microsoft.com/en-us/library/dn722499.aspx> QUESTION 77Drag and Drop QuestionYou manage an Azure virtual machine (VM) named AppVM. The application hosted on AppVM continuously writes small files to disk. Recently the usage of applications on AppVM has increased greatly.You need to improve disk performance on AppVM.Which Microsoft Azure Power Shell cmdlet should you use with each Power Shell command line? To answer, drag the appropriate Microsoft Azure Power Shell cmdlet to the correct location in the Power Shell code. Each Power Shell cmdlet may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

QUESTION 78Drag and Drop QuestionYou administer a virtual machine (VM) that is deployed to Azure. The VM hosts a web service that is used by several applications.You need to ensure that the VM sends a notification In the event that the average response time for the web service exceeds a pre-defined response time for an hour or more.Which three steps should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

**QUESTION 79** Drag and Drop Question You administer an Azure Virtual Machine (VM) named CON-CL1. CON-CL1 is in a cloud service named ContosoService1. You discover unauthorized traffic to CON-CL1. You need to:- Create a rule to limit access to CON-CL1.- Ensure that the new rule has the highest precedence. Which Azure Power Shell cmdlets and values should you use? To answer, drag the appropriate cmdlet or value to the correct location in the Power Shell command. Each cmdlet or value may be used once, more than once, or not at all. You may need to drag the split bat between panes or scroll to view content.

Answer:

**QUESTION 80** Hotspot Question Your company network has two branch offices. Some employees work remotely, including at public locations. You manage an Azure environment that includes several virtual networks. All users require access to the virtual networks. In the table below, identify which secure cross-premise connectivity option is needed for each type of user. Make only one selection in each column.

Secure cross-premise connectivity method	Branch Office Users	Remote Users
Site-to-site	<input type="radio"/>	<input type="radio"/>
Multi-site	<input type="radio"/>	<input type="radio"/>
Point-to-site	<input type="radio"/>	<input type="radio"/>

Answer:

Secure cross-premise connectivity method	Branch Office Users	Remote Users
Site-to-site	<input checked="" type="radio"/>	<input type="radio"/>
Multi-site	<input type="radio"/>	<input type="radio"/>
Point-to-site	<input type="radio"/>	<input checked="" type="radio"/>
