

[70-535 New Dumps] 70-535 Exam Dumps PDF and VCE Free Download in Braindump2go [315-325]

2018 June New Microsoft 70-535 Exam Dumps with PDF and VCE Free Updated Today! Following are some new 70-535 Real Exam Questions:1. | 2018 Latest 70-535 Exam Dumps (PDF & VCE) 354Q&As

Download: <https://www.braindump2go.com/70-535.html> 2. | 2018 Latest 70-535 Exam Questions & Answers

Download: https://drive.google.com/drive/folders/1K808iFXD_tKKveGZeLM1H8d81RAL6LCx?usp=sharing QUESTION 315 Note:

This question is part of a series of questions that present the same scenario. Each question on the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution. After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen. A company has custom ASP.net and Java applications that run on old versions of Windows and Linux.

The company plans to place applications in containers. You need to design a solution that includes networking, service discovery, and load balancing for the applications. The solution must support storage orchestration. Solution: You deploy each application to an Azure Container instance. Does the solution meet the goal? A. Yes B. No Answer: A Explanation: Azure Container Instances are really containers as a service. You request a container instance to be created based on an image and the container is created for you. You don't see an orchestrator, you don't see a VM, you don't see anything other than your container instance. References:

<https://azure.microsoft.com/en-us/services/container-instances/> QUESTION 316 Note: This question is part of a series of questions that present the same scenario. Each question on the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution. After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen. You are designing a storage solution to support on-premises resources and Azure-hosted resources. You need to provide on-premises storage that has built-in replication to Azure. Solution: You include Azure Files in the design. Does this solution meet the goal? A. Yes B. No Answer: B Explanation: <https://azure.microsoft.com/en-us/services/container-instances/> QUESTION 317 Hotspot Question A

company plans to implement an HTTP-based API to support a Web App. The Web App allows customers to check the status of their orders. The API must meet the following requirements: - Implement Azure Functions. - Provide public read-only operations. - Do not allow write operations. You need to recommend configuration options. What should you recommend? To answer, configure the appropriate options in the dialog box in the answer area. NOTE: Each correct selection is worth one point. Answer: Explanation: Azure Functions is a solution for easily running small pieces of code, or "functions," in the cloud. You can write just the code you need for the problem at hand, without worrying about a whole application or the infrastructure to run it. Functions can make development even more productive, and you can use your development language of choice, such as C#, F#, Node.js, Java, or PHP.

<https://docs.microsoft.com/en-us/azure/azure-functions/functions-overview> QUESTION 318 You have an Azure subscription named Subscription1. You create several Azure virtual machines in Subscription1. All of the virtual machines belong to the same virtual network. You have an on-premises Hyper-V server named Server1. Server1 hosts a virtual machine named VM1. You plan to replicate VM1 to Azure. You need to create additional objects in Subscription1 to support the planned deployment. Which three objects should you create? Each correct answer presents part of the solution. NOTE: Each correct selection is worth one point. A. storage account B. protection group C. Azure Traffic Manager instance D. endpoint E. Azure Site Recovery vault F. Hyper-V site Answer: AEF Explanation: You need to set up a Recovery Services vault to orchestrate and manage replication. Make sure Hyper-V hosts are prepared for Site Recovery deployment. You need a Microsoft Azure account, Azure networks, and storage accounts. References: <https://docs.microsoft.com/en-us/azure/site-recovery/azure-to-azure-tutorial-enable-replication>

QUESTION 319 You are designing the deployment of virtual machines (VMs) and web services that run in Azure. You need to specify the desired state of a node and ensure that the node remains at that state. What should you use? A. Azure Automation DSC B. Windows Azure Pack C. Service Management Automation D. System Center 2016 Orchestrator Answer: A Explanation: Azure Automation DSC is an Azure service that allows you to write, manage, and compile PowerShell Desired State Configuration (DSC) configurations, import DSC Resources, and assign configurations to target nodes, all in the cloud. References: <https://docs.microsoft.com/en-us/azure/automation/automation-dsc-overview> QUESTION 320 A company has a hybrid ASP.NET Web API application that is based on a software as a service (SaaS) offering. Users report general issues with the data. You advise the company to implement live monitoring and use ad hoc queries on stored JSON data. You also advise the company to set up smart alerting to detect anomalies in the data. You need to recommend a solution to set up smart alerting. What should you recommend? A. Azure Security Center and Azure Data Lake Store B. Azure Data Lake Analytics and Microsoft Operations Management Suite C. Azure Application Insights and Azure Log Analytics D. Azure Site Recovery and Microsoft Operations

Management Suite. Answer: C Explanation: Azure Application Insights is a cloud-based monitoring service for Microsoft Azure and other cloud-based services. It provides a wide range of monitoring and diagnostic capabilities that allow you to quickly find the root cause of application issues. Azure Log Analytics is a cloud-based service that allows you to collect, analyze, and visualize log data from your Azure resources and other cloud-based services. Azure Site Recovery is a cloud-based service that allows you to protect your on-premises workloads and applications by replicating them to Azure. Microsoft Operations Management Suite (OMS) is a cloud-based management solution that provides a unified view of your IT environment. References: <https://docs.microsoft.com/en-us/azure/automation/automation-dsc-overview>

QUESTION 321 You are designing the deployment of virtual machines (VMs) and web services that run in Azure. You need to specify the desired state of a node and ensure that the node remains at that state. What should you use? A. Azure Automation DSC B. Windows Azure Pack C. Service Management Automation D. System Center 2016 Orchestrator Answer: A Explanation: Azure Automation DSC is an Azure service that allows you to write, manage, and compile PowerShell Desired State Configuration (DSC) configurations, import DSC Resources, and assign configurations to target nodes, all in the cloud. References: <https://docs.microsoft.com/en-us/azure/automation/automation-dsc-overview> QUESTION 322 A company has a hybrid ASP.NET Web API application that is based on a software as a service (SaaS) offering. Users report general issues with the data. You advise the company to implement live monitoring and use ad hoc queries on stored JSON data. You also advise the company to set up smart alerting to detect anomalies in the data. You need to recommend a solution to set up smart alerting. What should you recommend? A. Azure Security Center and Azure Data Lake Store B. Azure Data Lake Analytics and Microsoft Operations Management Suite C. Azure Application Insights and Azure Log Analytics D. Azure Site Recovery and Microsoft Operations

Management Suite. Answer: C Explanation: Azure Application Insights is a cloud-based monitoring service for Microsoft Azure and other cloud-based services. It provides a wide range of monitoring and diagnostic capabilities that allow you to quickly find the root cause of application issues. Azure Log Analytics is a cloud-based service that allows you to collect, analyze, and visualize log data from your Azure resources and other cloud-based services. Azure Site Recovery is a cloud-based service that allows you to protect your on-premises workloads and applications by replicating them to Azure. Microsoft Operations Management Suite (OMS) is a cloud-based management solution that provides a unified view of your IT environment. References: <https://docs.microsoft.com/en-us/azure/automation/automation-dsc-overview>

QUESTION 323 You are designing the deployment of virtual machines (VMs) and web services that run in Azure. You need to specify the desired state of a node and ensure that the node remains at that state. What should you use? A. Azure Automation DSC B. Windows Azure Pack C. Service Management Automation D. System Center 2016 Orchestrator Answer: A Explanation: Azure Automation DSC is an Azure service that allows you to write, manage, and compile PowerShell Desired State Configuration (DSC) configurations, import DSC Resources, and assign configurations to target nodes, all in the cloud. References: <https://docs.microsoft.com/en-us/azure/automation/automation-dsc-overview> QUESTION 324 A company has a hybrid ASP.NET Web API application that is based on a software as a service (SaaS) offering. Users report general issues with the data. You advise the company to implement live monitoring and use ad hoc queries on stored JSON data. You also advise the company to set up smart alerting to detect anomalies in the data. You need to recommend a solution to set up smart alerting. What should you recommend? A. Azure Security Center and Azure Data Lake Store B. Azure Data Lake Analytics and Microsoft Operations Management Suite C. Azure Application Insights and Azure Log Analytics D. Azure Site Recovery and Microsoft Operations

Management Suite. Answer: C Explanation: Azure Application Insights is a cloud-based monitoring service for Microsoft Azure and other cloud-based services. It provides a wide range of monitoring and diagnostic capabilities that allow you to quickly find the root cause of application issues. Azure Log Analytics is a cloud-based service that allows you to collect, analyze, and visualize log data from your Azure resources and other cloud-based services. Azure Site Recovery is a cloud-based service that allows you to protect your on-premises workloads and applications by replicating them to Azure. Microsoft Operations Management Suite (OMS) is a cloud-based management solution that provides a unified view of your IT environment. References: <https://docs.microsoft.com/en-us/azure/automation/automation-dsc-overview>

Management Suite Answer: A Explanation:

QUESTION 321 A company hosts virtual machines (VMs) in an on-premises datacenter and in Azure. The on-premises and Azure-based VMs communicate using ExpressRoute. The company wants to be able to continue regular operations if the ExpressRoute connection fails. Failover connections must use the Internet and must not require Multiprotocol Label Switching (MPLS) support. You need to recommend a solution that provides continued operations. What should you recommend? A. Set up a VPN connection. B. Set up a second ExpressRoute connection. C. Increase the bandwidth of the existing ExpressRoute connection. D. Increase the bandwidth for the on-premises internet connection. Answer: A Explanation: Remember that replication from Azure to on-premises can happen only over the S2S VPN, or over the private peering of your ExpressRoute network. Ensure that enough bandwidth is available over that network channel. References:

<https://docs.microsoft.com/en-us/azure/expressroute/expressroute-faqs> QUESTION 322 You are designing an Azure solution. The solution must meet the following requirements: - Distribute traffic to different pools of dedicated virtual machines (VMs) based on rules. - Provide SSL offloading capabilities. You need to recommend a solution to distribute network traffic. Which technology should you recommend? A. Azure Load Balancer B. server-level firewall rules C. Azure Application Gateway D. Azure Traffic Manager Answer: C Explanation: Azure Application Gateway is a web traffic load balancer that enables you to manage traffic to your web applications. Azure Application Gateway can be configured to terminate the Secure Sockets Layer (SSL) session at the gateway to avoid costly SSL decryption tasks to happen at the web farm. SSL offload also simplifies the front-end server setup and management of the web application. References:

<https://docs.microsoft.com/en-us/azure/application-gateway/application-gateway-introduction>

<https://docs.microsoft.com/en-us/azure/application-gateway/application-gateway-ssl> QUESTION 323 A company receives over 1,000 emails each day through the general alias info@contoso.com. The emails originate from all over the world, and include complaints and sales inquiries. Many emails relate to random topics. The company must be able to automatically categorize emails based upon the company location geographically closest to the sender. You need to recommend a solution. Which two options should you recommend? Each correct answer presents a complete solution. NOTE: Each correct selection presents a complete solution. A. Bing Web Search API B. Bot Builder SDK C. Text Analytics API D. Language Understanding Intelligent Service (LUIS) programmatic API Answer: B Explanation: The Microsoft Bot Framework provides just what you need to build and connect intelligent bots that interact naturally wherever your users are talking, from text/SMS to Skype, Slack, Office 365 mail and other popular services. References: <https://blog.botframework.com/2018/05/07/build-a-microsoft-bot-framework-bot-with-the-bot-builder-sdk-v4/> QUESTION 324 You are developing a hybrid solution for a video editing company. Videos are currently edited on-premises and stored in Server Message Block (SMB) protocol share. Due to legal regulations, videos must be stored on-premises. You must distribute videos by using Azure Media Services. You need to recommend a storage solution for the videos. What should you recommend? A. Azure StorSimple B. Azure Blob storage C. Azure Table storage D. Azure Cosmos DB Answer: A

Explanation: The Microsoft Azure StorSimple Virtual Array is an integrated storage solution that manages storage tasks between an on-premises virtual array running in a hypervisor and Microsoft Azure cloud storage. The virtual array supports the iSCSI or Server Message Block (SMB) protocol. It runs on your existing hypervisor infrastructure and provides tiering to the cloud, cloud backup, fast restore, item-level recovery, and disaster recovery features. References:

<https://docs.microsoft.com/en-us/azure/storsimple/storsimple-ova-overview> QUESTION 325 Drag and Drop Question You manage a large number of on-premises applications. You plan to migrate the applications to Azure. You need to implement Azure Storage for each type of data that the applications use. For each type of data, which storage mechanism should you use? To answer, drag the appropriate storage mechanism to the correct type of data. Each storage mechanism may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content. Answer: !!!RECOMMEND!!! 1.
