[August-2019-New]Real AZ-300 Exam Questions 255Q Free Download in Braindump2go(New Questions)

 August/2019 Braindump2go AZ-300 Exam Dumps with PDF and VCE New Updated Today! Following are some AZ-300 Real Exam Questions:1.|2019 Latest Braindump2go AZ-300 Exam Dumps (PDF & VCE) Instant Download:https://www.braindump2go.com/az-300.html2.|2019 Latest Braindump2go AZ-300 Exam Questions & Answers Instant Download:https://drive.google.com/drive/folders/1ifSXrUVi3y9XBrpRaRBufubgdkFJ0E2n?usp=sharing NEW QUESTIONHotspot QuestionYou are developing a SMS-based testing solution. The solution sends users a question by using SMS.Early responders may qualify for prizes.Users must respond with an answer choice within 90 seconds. You must be able to track how long it takes each user to respond.You create a durable Azure Function named SendSmsQuizQuestion that uses Twilio to send messages.You need to write the code for MessageQuiz.How should you complete the code? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point.

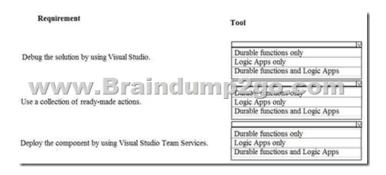

Answer:

 NEW QUESTIONHotspot QuestionYou are developing a workflow solution using Azure technologies. What should you implement to meet each requirement? To answer, select the appropriate options in the answer area.NOTE: Each correct selection is worth one point.

Requirement	Tool
Debug the solution by using Visual Studio.	☑ Durable functions only / Logic Apps only / Durable functions and Logic Apps
Use a collection of ready-made actions.	☑ Durable functions only / Logic Apps only / Durable functions and Logic Apps
Deploy the component by using Visual Studio Team Services.	☑ Durable functions only / Logic Apps only / Durable functions and Logic Apps

Answer:

Requirement	Tool
Debug the solution by using Visual Studio.	☑ **Durable functions only** / Logic Apps only / Durable functions and Logic Apps
Use a collection of ready-made actions.	☑ Durable functions only / **Logic Apps only** / Durable functions and Logic Apps
Deploy the component by using Visual Studio Team Services.	☑ **Durable functions only** / Logic Apps only / Durable functions and Logic Apps

NEW QUESTIONHotspot QuestionYou are developing an Azure Function that will be triggered using a webhook from an external application. The Azure Function will receive JSON data in the body of the request. Calling applications send an account ID as part of the URL. The number at the end of the URL is an integer. The format for the URL resembles the following: /api/account/1 The Azure Function must accept all incoming requests without requiring keys or tokens. You need to complete the attributes for the Azure Function. How should you complete the code? To answer, select the appropriate options in the answer area.NOTE: Each correct selection is worth one point.

```
[ ☑ FunctionName ("ProcessItem")]
    RouteAttribute
    QueueTrigger
    HttpTrigger

public static async Task<HttpResponseMessage> Run(

[ ☑ BlobTrigger   (AuthorizationLevel. ☑ Anonymous , "post",
    FileTrigger                            Admin
    QueueTrigger                           User
    HttpTrigger                            Function

Route = ☑ /api/account/1
          ProcessItem/{accountId:int}
          account/{accountId:int}
          /account/

☑ string accountId           , TraceWriter log)
  int accountId
  [FromBody] string accountId
  int account

{
    Item itemToProcess = await req.Content.ReadAsAsync<Item>();
    log.Info($"Processing item {itemToProcess.Id} for account {accountId}");
    var processedItem = DoItemProcessing(itemToProcess);
    return req.CreateResponse(HttpStatusCode.OK, processedItem);
```
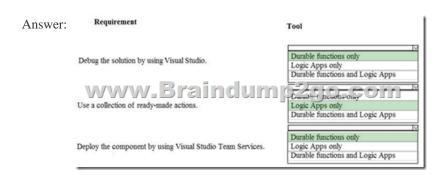

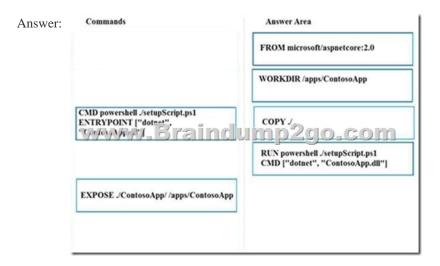

Answer:

```
[                    ✓ ("ProcessItem")]
    FunctionName
    RouteAttribute
    QueueTrigger
    HttpTrigger

public static async Task<HttpResponseMessage> Run(

[                    ✓ (AuthorizationLevel.        Anonymous  ✓   , "post",
    BlobTrigger                                    Admin
    FileTrigger                                    User
    QueueTrigger                                   Function
    HttpTrigger

Route = "                                    )]HttpRequestMessage req,
             /api/account/1                     ✓
             ProcessItem/{accountId:int}
             account/{accountId:int}
             /account/

    string accountId                   ✓
    int accountId                          , TraceWriter log)
    [FromBody] string accountId
    int account

{
Item itemToProcess = await req.Content.ReadAsAsync<Item>();
log.Info($"Processing item {itemToProcess.Id} for account {accountId}");
var processedItem = DoItemProcessing(itemToProcess);
return req.CreateResponse(HttpStatusCode.OK, processedItem);
```

]NEW QUESTIONDrag and Drop QuestionYou plan to create a Docker image that runs an ASP.NET Core application named ContosoApp. You have a setup script named setupScript.ps1 and a series of application files including ContosoApp.dll. You need to create a Dockerfile document that meets the following requirements:- Call setupScript.ps1 when the container is built.- Run ContosoApp.dll when the container starts.The Dockerfile document must be created in the same folder where ContosoApp.dll and setupScript.ps1 are stored.Which four commands should you use to develop the solution? To answer, move the appropriate commands from the list of commands to the answer area and arrange them in the correct order.

Commands	Answer Area
RUN powershell ./setupScript.ps1 CMD ["dotnet", "ContosoApp.dll"]	
FROM microsoft/aspnetcore:2.0	
CMD powershell ./setupScript.ps1 ENTRYPOINT ["dotnet", "ContosoApp.dll"]	
WORKDIR /apps/ContosoApp	
EXPOSE ./ContosoApp/ /apps/ContosoApp	
COPY ./.	

Answer:

Commands	Answer Area
	FROM microsoft/aspnetcore:2.0
	WORKDIR /apps/ContosoApp
CMD powershell ./setupScript.ps1 ENTRYPOINT ["dotnet", "ContosoApp.dll"]	COPY ./.
	RUN powershell ./setupScript.ps1 CMD ["dotnet", "ContosoApp.dll"]
EXPOSE ./ContosoApp/ /apps/ContosoApp	

NEW QUESTIONDrag and Drop QuestionFourth Coffee has an ASP.Net Core web app that runs in Docker. The app is mapped to the www.fourthcoffee.com domain.Fourth Coffee is migrating this application to Azure. You need to provision an App Service Web

App to host this docker image and map the custom domain to the App Service web app.A resource group named FourthCofeePublicWebResourceGroup has been created in the WestUS region that contains an App Service Plan named AppServiceLinuxDockerPlan. Which order should the CLI commands be used to develop the solution? To answer, move all of the Azure CLI commands from the list of commands to the answer area and arrange them in the correct order.

Answer:
