

Answer:

QUESTION 193 Hotspot Question Your network contains an Active Directory domain named contoso.com. Technicians use Windows Deployment Services (WDS) to deploy Windows Server 2012 R2. The network contains a server named Server1 that runs Windows Server 2012 R2. Server1 has the Hyper-V server role installed. You need to ensure that you can use WDS to deploy Windows Server 2012 R2 to a virtual machine named VM1. Which settings should you configure? To answer, select the appropriate settings in the answer area.

Answer:

QUESTION 194 Hotspot Question Your network contains an Active Directory domain named contoso.com. The domain contains a member server named Hyperv1 and a domain controller named DC1. Hyperv1 has the Hyper-V server role installed. DC1 is a virtual machine on Hyperv1. Users report that the time on their client computer is incorrect. You log on to DC1 and verify that the time services are configured correctly. You need to prevent time conflicts between the time provided by DC1 and other potential

time sources. What should you configure? To answer, select the appropriate object in the answer area.

Answer:

QUESTION 195 You perform a Server Core Installation of Windows Server 2012 R2 on a server named Server1. You need to add a graphical user interface (GUI) to Server1. Which tool should you use? A. the `dism.exe` command B. the `Add-WindowsFeature` cmdlet C. the `imagex.exe` command D. the `setup.exe` command E. the `ocsetup.exe` command F. the `Add-WindowsPackage` cmdlet G. the `Install-Module` cmdlet H. the `Install-RoleService` cmdlet
Answer: B
Explanation: `Add-WindowsFeature` - The `Add-WindowsFeature` cmdlet allows you to install specified roles, role services, and features on a computer that is running Windows Server 2008 R2. `Install-WindowsFeature` - Installs one or more Windows Server roles, role services, or features on either the local or a specified remote server that is running Windows Server 2012 R2. This cmdlet is equivalent to and replaces `Add-WindowsFeature`, the cmdlet that was used to install roles, role services, and features in Windows Server 2008 R2. `dism /online /get-features PS C:> Install-WindowsFeature -Name Web-Server ?IncludeAllSubFeature -ComputerName Server1 -WhatIf`

<http://technet.microsoft.com/en-us/library/hh824822.aspx> [http://technet.microsoft.com/en-us/library/dd744582\(v=ws.10\).aspx](http://technet.microsoft.com/en-us/library/dd744582(v=ws.10).aspx) [http://technet.microsoft.com/en-us/library/jj205467\(v=wps.620\).aspx](http://technet.microsoft.com/en-us/library/jj205467(v=wps.620).aspx)
QUESTION 196 You have a server named Server1 that runs Windows Server 2012 R2. Server1 has the Hyper-V server role installed. You need to configure storage for a virtual machine to meet the following requirements: - Support up to 3 TB of data on a single hard disk. - Allocate disk space as needed. - Use a portable storage format. What should you configure? A. A pass-through disk B. A fixed-size VHDC. C. A dynamically expanding VHDD. D. A fixed-size VHDXE. E. A dynamically expanding VHDX
Answer: E
Explanation:

<http://technet.microsoft.com/en-us/library/hh831446.aspx> Support for virtual hard disk storage capacity of up to 64 TB. `vhd` max is 2TB
QUESTION 197 Your network contains an Active Directory domain named `contoso.com`. All user accounts are in an organizational unit (OU) named `Employees`. You create a Group Policy object (GPO) named `GP1`. You link `GP1` to the `Employees` OU. You need to ensure that `GP1` does not apply to the members of a group named `Managers`. What should you configure? A. The Security settings of `Employees` B. The WMI filter for `GP1` C. The Block Inheritance option for `Employees` D. The Security settings of `GP1`
Answer: D
Explanation: A. Wrong Group B. Windows Management Instrumentation (WMI) filters allow you to dynamically determine the scope of Group Policy objects (GPOs) based on attributes of the target computer. C. Blocking inheritance

prevents Group Policy objects (GPOs) that are linked to higher sites, domains, or organizational units from being automatically inherited by the child-level. D. Set Managers to - Members of this security group are exempt from this Group Policy object. Security settings. You use the Security Settings extension to set security options for computers and users within the scope of a Group Policy object. You can define local computer, domain, and network security settings. Figure belows shows an example of the security settings that allow everyone to be affected by this GPO except the members of the Management group, who were explicitly denied permission to the GPO by setting the Apply Group Policy ACE to Deny. Note that if a member of the Management group were also a member of a group that had an explicit Allow setting for the Apply Group Policy ACE, the Deny would take precedence and the GPO would not affect the user.

<http://technet.microsoft.com/en-us/library/cc731076.aspx>
[http://technet.microsoft.com/en-us/library/cc779036\(v=ws.10\).aspx](http://technet.microsoft.com/en-us/library/cc779036(v=ws.10).aspx)

QUESTION 198 You have a virtual machine named VM1. You install Windows Server 2012 R2 on VM1. You plan to use VM1 as an image that will be distributed to sales users to demonstrate the features of a custom application. The custom application only requires the Web Server (IIS) server role to be installed. You need to ensure that the VHD file for VM1 only contains the required Windows Server 2012 R2 source files. Which tool should you use? A. `dism.exe` B. `ocsetup.exe` C. `imagex.exe` D. `servermanagercmd.exe` Answer: A Explanation: <http://technet.microsoft.com/en-us/magazine/dd490958.aspx> You can use DISM to:

Add, remove, and enumerate packages and drivers. Enable or disable Windows features. Apply changes based on the offline servicing section of an `unattend.xml` answer file. Configure international settings. Upgrade a Windows image to a different edition. Prepare a Windows PE image. Take advantage of better logging. Service down-level operating systems like Windows Vista with SP1 and Windows Server 2008. Service all platforms (32-bit, 64-bit, and Itanium). Service a 32-bit image from a 64-bit host and service a 64-bit image from a 32-bit host. Make use of old Package Manager scripts. QUESTION 199 Your network contains an Active Directory domain named `contoso.com`. The domain contains a server named `Server1`. `Server1` runs Windows Server 2012 R2 and has the Hyper-V server role installed. On `Server1`, you create and start a virtual machine named `VM1`. `VM1` is configured as shown in the following table.

Setting	Configuration
Minimum RAM	2048 MB
Disk type	Fixed size
Disk size	100 GB

You plan to create a snapshot of VM1. You need to recommend a solution to minimize the amount of disk space used for the snapshot of VM1. What should you do before you create the snapshot? A. Run the Stop-VM cmdlet. B. Run the Convert-VHD cmdlet. C. Decrease the Maximum RAM. D. Decrease the Minimum RAM. Answer: A
Explanation: What are virtual machine snapshots? Virtual machine snapshots capture the state, data, and hardware configuration of a running virtual machine. What are snapshots used for? Snapshots provide a fast and easy way to revert the virtual machine to a previous state. For this reason, virtual machine snapshots are intended mainly for use in development and test environments. Having an easy way to revert a virtual machine can be very useful if you need to recreate a specific state or condition so that you can troubleshoot a problem. There are certain circumstances in which it may make sense to use snapshots in a production environment. For example, you can use snapshots to provide a way to revert a potentially risky operation in a production environment, such as applying an update to the software running in the virtual machine. How are snapshots stored? Snapshot data files are stored as .avhd files. Taking multiple snapshots can quickly consume storage space. In the first release version of Hyper-V (KB950050) and in Hyper-V in Windows Server 2008 Service Pack 2, snapshot data files usually are located in the same folder as the virtual machine by default. In Hyper-V in Windows Server 2008 R2, the files usually are located in the same folder as the virtual hard disk. The following exceptions affect the location of the snapshot data files: If the virtual machine was imported with snapshots, they are stored in their own folder. If the virtual machine has no snapshots and you configure the virtual machine snapshot setting, all snapshots you take afterwards will be stored in the folder you specify. <http://technet.microsoft.com/pt-pt/library/dd560637%28v=ws.10%29.aspx> Reducing the available RAM for the VM would reduce the size of the snapshot, what better than have the machine turn off, not using any memory ;)

QUESTION 200 Your network contains an Active Directory domain named contoso.com. The domain contains a file server named Server1 that runs Windows Server 2012 R2. Server1 contains a shared folder named Share1. Share1 contains the home folder of each user. All users have the necessary permissions to access only their home folder. The users report that when they access Share1, they can see the home folders of all the users. You need to ensure that the users see only their home folder when they access Share1. What should you do from Server1? A. From Windows Explorer, modify the properties of the volume that contains Share1. B. From Server Manager, modify the properties of the volume that contains Share1. C. From Server Manager, modify the properties of Share1. D. From Windows Explorer, modify the properties of Share1. Answer: C
Explanation:

[http://technet.microsoft.com/en-us/library/cc784710\(v=ws.10\).aspx](http://technet.microsoft.com/en-us/library/cc784710(v=ws.10).aspx) Access based enumeration needs to be enabled:

Braindump2go New Released 70-410 Dump PDF Free Download, 471 Questions in all, Passing Your Exam 100% Easily!

Installing and Configuring Windows Server 2012 R2 Exam: 70-410

Product Description Exam Number/Code: 70-410

Exam Number/Code: 70-410

"Installing and Configuring Windows Server 2012 R2 Exam", also known as 70-410 exam, is a Microsoft Certification. With the complete collection of questions and answers, Braindump2go has assembled to take you through 471 Q&As to your 70-410 Exam preparation. In the 70-410 exam resources, you will cover every field and category in Microsoft MCSA helping to ready you for your successful Microsoft Certification.

Questions and Answers : 471 Q&As
