QUESTION 31 Drag and Drop Question You are the Office 365 administrator for your company. You audit the Windows Azure Active Directory Rights Management configuration for the company. You need to view a log of the recent administrative commands performed against the Microsoft Rights Management Service. Which three Windows PowerShell cmdlets should you run in sequence? To answer, move the appropriate cmdlets from the list of actions to the answer area and arrange them in the correct order.

Answer:

QUESTION 32 Your company has an Office 365 subscription. The network contains an Active Directory domain. You configure single sign-on for all users. You need to verify that single sign-on functions for the users who access Office 365 from the Internet. What should you run? A. the Get-MSOLFederationProperty cmdlet B. the Test-OrganizationRelationship cmdlet C. the Microsoft Remote Connectivity Analyzer D. the Microsoft Exchange Server Deployment Assistant Answer: C **QUESTION 33** You are the administrator for a company named Contoso, Ltd. The company has an Office 365 subscription. You need to prevent users from changing their user display name by using Outlook Web App. What should you do? A. Run the Set-MsolCompanyContactInformation cmdlet. B. Modify the default email address policy. C. Run the Set-MsolUserPrincipalName cmdlet. D. Modify the default role assignment policy. Answer: D **QUESTION 34** You are the Office 365 administrator for your company. The company uses Active Directory Federation Services (AD FS) to provide single sign-on to

cloud-based services. You enable multi- factor authentication.Users must NOT be required to use multi-factor authentication when they sign in from the company's main office location. However, users must be required to verify their identity with a password and token when they access resources from remote locations.You need to configure the environment.What should you do? A. Disable AD FS multi-factor authentication.B. Configure an IP blacklist for the main office location.C. Disable the AD FS proxy.D. Configure an IP whitelist for the main office location. Answer: D QUESTION 35Hotspot QuestionAn organization has over 10,000 users and uses a SQL-based Active Directory Federation Services (AD FS) server farm.You need to change the AD FS 2.0 service account password. What should you do? Select the correct answer from each list in the answer area.

Step	Action
1.	Log on to each <input type="text"/> <ul style="list-style-type: none"> directory sync server federation proxy server federation server workstation
2.	Modify the application pool identity by using the <input type="text"/> <ul style="list-style-type: none"> AD FS management Internet Information Services (IIS) manager local security policy task scheduler
3.	Modify the AD FS 2.0 Windows Service Properties by using the <input type="text"/> <ul style="list-style-type: none"> Office 365 admin center System Configuration Windows Services MMC snap-in

Answer:

Step	Action
1.	Log on to each <input type="text"/> <ul style="list-style-type: none"> directory sync server federation proxy server federation server workstation
2.	Modify the application pool identity by using the <input type="text"/> <ul style="list-style-type: none"> AD FS management Internet Information Services (IIS) manager local security policy task scheduler
3.	Modify the AD FS 2.0 Windows Service Properties by using the <input type="text"/> <ul style="list-style-type: none"> Office 365 admin center System Configuration Windows Services MMC snap-in

QUESTION 36Drag and Drop QuestionA company deploys an Office 365 tenant. You install the Active Directory Federation Services (AD FS) server role on a server that runs Windows Server 2012.You install and configure the Federation Service Proxy role service. Users sign in by using the Security Assertion Markup Language (SAML) protocol.You need to customize the sign-in pages for Office 365. Which pages should you customize? To answer, drag the appropriate page to the correct customization. Each page may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

QUESTION 37 Contoso uses Office 365 for collaboration services. You implement single sign-on (SSO) with Office 365 by using Active Directory Federation Services (AD FS). You need to implement Windows Azure multi-factor authentication. Which three actions should you perform? Each correct answer presents part of the solution. A. On the AD FS federation server, run PhoneFactorAgentSetup.exe. B. On the AD FS Federation server, run WindowsAzureSDK-x64.exe. C. On the AD FS Federation server, run the Windows PowerShell cmdlet Register-AdfsAuthenticationProvider. D. On the AD FS Federation server, run FsConfigWizard.exe. E. Run the Active Directory Domains and Trusts MMC snap-in. Register Windows Azure Multi-Factor Authentication Server as an additional authentication provider. F. Run the Windows Azure Multi-Factor Authentication Server Authentication Configuration Wizard. Answer: BCF

QUESTION 38 A company plans to deploy an Office 365 tenant. You have two servers named FS1 and FS2 that have the Federation Service Proxy role service installed. You must deploy Active Directory Federation Services (AD FS) on Windows Server 2012. You need to configure name resolution for FS1 and FS2. What should you do? A. On FS1 and FS2, add the cluster DNS name and IP address of the federation server farm to the hosts file. B. On FS1 only, add the cluster DNS name and IP address of the federation server farm to the hosts file. C. On FS1 only, add the cluster NetBIOS name and IP address of the federation server farm to the LMHOSTS file. D. On FS1 and FS2, add the cluster NetBIOS name and IP address of the federation server farm to the LMHOSTS file. Answer: A

QUESTION 39 Drag and Drop Question You are the Office 365 administrator for your company. You must configure a trust between the on-premises Active Directory domain and the Office 365 environment by using Active Directory Federation Services. You need to assign the correct certificate to the description of your on-premises server environment below. Which certificate types should you assign? To answer, drag the appropriate certificate type to the correct test description. Each certificate type may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

	Description	Certificate Type
Client	Secures the communication between federation servers, clients, and federation server proxy computers.	
Domain		
SSL		
X.509	Securely signs all tokens that the federation server issues for the cloud-based services.	

Answer:

	Description	Certificate Type
Client	Secures the communication between federation servers, clients, and federation server proxy computers.	SSL
Domain		
SSL		
X.509	Securely signs all tokens that the federation server issues for the cloud-based services.	X.509

QUESTION 40 A company named Fabrikam, Inc. is deploying an Office 365 tenant. You install Active Directory Federation Services (AD FS) on a server that runs Windows Server 2012. The company's environment is described in the following table:

Cluster DNS Name
Server node in cloud
Server node in cloud

You must obtain a certificate from a certification authority and install it on the federation servers. You need to specify the subject name for the certificate. Which name should you specify? A. fs.fabnkam.com B. server1.fabrikam.com C. fabrikam.com D. server2.fabrikam.com
Answer: A
