QUESTION 171 Hotspot Question You deploy a SharePoint Server 2013 server farm and you create a team site. You perform the following tasks in the team site: - Create a content type named Financial. - Create a content type named Informational. - Enable all auditing policies for both of the content types. - Create a document library named Data and add the new content types to the library. - Enable the bar code policy feature on the Financial content type in the new library only. For each of the following statements, select Yes if the statement is true. Otherwise select No.

	Yes	No
When users upload documents to the Data document library, they can specify a content type of Financial or Informational.	<input type="radio"/>	<input type="radio"/>
When users upload documents to the Data document library, they can specify a content type of Financial or Informational.	<input type="radio"/>	<input type="radio"/>
A log will be kept of all the users who attempt to access documents that use the Financial content type in the Data document library.	<input type="radio"/>	<input type="radio"/>

Answer:

	Yes	No
When users upload documents to the Data document library, they can specify a content type of Financial or Informational.	<input checked="" type="radio"/>	<input type="radio"/>
When users upload documents to the Data document library, they can specify a content type of Financial or Informational.	<input checked="" type="radio"/>	<input type="radio"/>
A log will be kept of all the users who attempt to access documents that use the Financial content type in the Data document library.	<input checked="" type="radio"/>	<input type="radio"/>

QUESTION 172 You plan to deploy a SharePoint Server 2013 server farm. The farm will have two front-end Web servers that are configured as shown in the following table.

Server name	Memory	Processor
WFE1	2 GB	Four physical cores
WFE2	8 GB	One physical core

You need to ensure that pages are rendered by using the front-end Web server that has the smallest health threshold value. Which service should you use? A. Request Management B. Distributed Cache C. Microsoft SharePoint Foundation Subscription Settings Service D. Work Management Service Answer: A Explanation: Request Manager is functionality in SharePoint Server 2013 that enables administrators to manage incoming requests and determine how SharePoint Server 2013 routes these requests. Note: Request routing and prioritizing can be divided into two parts: request-rule matching and front-end web server filtering. Request-rule matching happens exactly like in request routing. Front-end web server filtering uses the health threshold parameter from the throttling rules in combination with front-end web server health data to determine whether the front-end web servers in the selected routing pool can process the given request. **QUESTION 173** Drag and Drop Question You are configuring permission levels for two

user groups named Managers and Editors. You have the following requirements for SharePoint site permissions:- Managers must be able to view website usage reports.- Editors must be able to edit documents online. You need to configure the appropriate permission levels for each group. Which permission levels should you assign? (To answer, drag the appropriate permission levels to the correct group or groups in the answer area. Each permission level may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.)

Permission Levels		Answer Area	
Apply Style Sheets		Group	Permission level
Manage Lists		Managers	permission level
Manage Web Site		Editor	permission level
Use Client Integration Features			
View Web Analytics Data			

Answer:

Permission Levels		Answer Area	
Apply Style Sheets		Group	Permission level
Manage Lists		Managers	View Web Analytics Data
Manage Web Site		Editor	Use Client Integration Features
Use Client Integration Features			
View Web Analytics Data			

QUESTION 174 Drag and Drop Question You have a SharePoint Server 2013 server farm. You have a web application named Web1 that contains three site collections named Site1, Site2, and Site3. Site3 contains several content types. Site3 has the Content Type Syndication hub feature enabled. You create a Managed Metadata Service application named MMS1. You need to ensure that users can use the content types from Site3 in Site1 and Site2. Which three actions should you perform in sequence? (To answer, move the appropriate three actions from the list of actions to the answer area and arrange them in the correct order.)

Actions
Configure a proxy connection for MMS1.
Publish the content types.
Activate the Cross-Site Collection Publishing feature in Site3.
Activate the Content Type Syndication feature in Site1 and Site2.
Configure the properties of MMS1.
Publish the Managed Metadata Service application.

Answer:

Actions	Answer Area
Configure a proxy connection for MMS1.	Configure the properties of MMS1.
Publish the content types.	Configure a proxy connection for MMS1.
Activate the Cross-Site Collection Publishing feature in Site3.	
Activate the Content Type Syndication feature in Site1 and Site2.	
Publish the Managed Metadata Service application.	

QUESTION 175 You plan to deploy a SharePoint Server 2013 server farm to a test environment on a single server. The server has the following configurations:- A 64-bit processor that has four cores- Windows Server 2008 Enterprise- 8 GB of physical memory- A 2-TB hard disk You need to ensure that you can deploy the SharePoint Server 2013 farm to the server. What should you do? A. Upgrade the operating system. B. Replace the processor. C. Add more physical memory. D. Add another hard disk drive.
 Answer: A Explanation: Need The 64-bit edition of Windows Server 2008 R2 Service Pack 1 (SP1) Standard, Enterprise, or Datacenter or the 64-bit edition of Windows Server 2012 Standard or Datacenter QUESTION 176 Drag and Drop Question You are

the administrator for a SharePoint 2010 farm. You install and deploy a SharePoint 2013 farm. The SharePoint 2013 farm must use the content from the SharePoint 2010 farm. You need to upgrade from SharePoint 2010 mode to SharePoint 2013 mode. Which four actions should you perform in sequence? (To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.)

Actions	Answer Area
Set the SharePoint 2010 content databases to Read-Only . Then back up the content databases from the SharePoint 2010 farm and copy the backups to the SharePoint 2013 farm.	
Restore the SharePoint 2010 content databases to the Microsoft SQL Server instance in the SharePoint 2013 farm.	
Create a web application in the SharePoint 2013 farm. Attach the content databases to the web applications.	
Set the content databases to Read/Write in the SharePoint 2013 farm.	
Run site collection health checks in the SharePoint 2013 farm.	
Upgrade individual site collections in the SharePoint 2013 farm.	

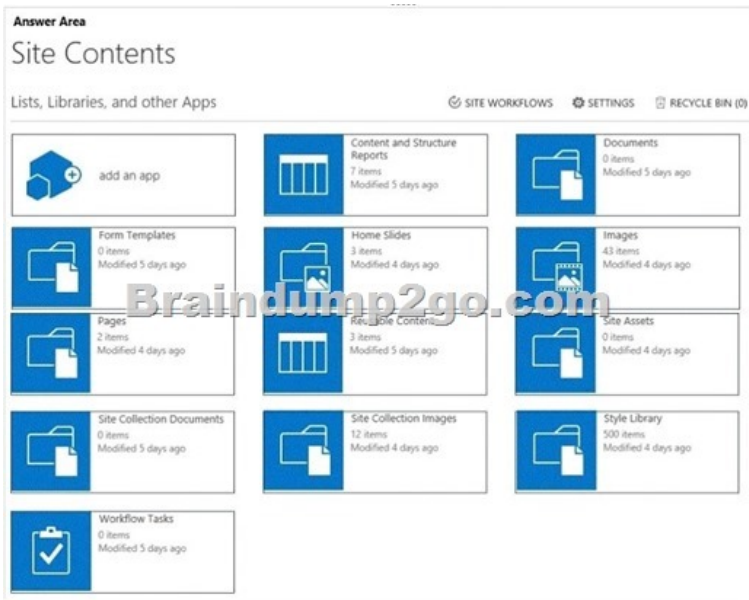

Answer:

Actions	Answer Area
Set the SharePoint 2010 content databases to Read-Only . Then back up the content databases from the SharePoint 2010 farm and copy the backups to the SharePoint 2013 farm.	Set the SharePoint 2010 content databases to Read-Only . Then back up the content databases from the SharePoint 2010 farm and copy the backups to the SharePoint 2013 farm.
Restore the SharePoint 2010 content databases to the Microsoft SQL Server instance in the SharePoint 2013 farm.	Restore the SharePoint 2010 content databases to the Microsoft SQL Server instance in the SharePoint 2013 farm.
Create a web application in the SharePoint 2013 farm. Attach the content databases to the web applications.	
Set the content databases to Read/Write in the SharePoint 2013 farm.	Set the content databases to Read/Write in the SharePoint 2013 farm.
Run site collection health checks in the SharePoint 2013 farm.	
Upgrade individual site collections in the SharePoint 2013 farm.	Upgrade individual site collections in the SharePoint 2013 farm.

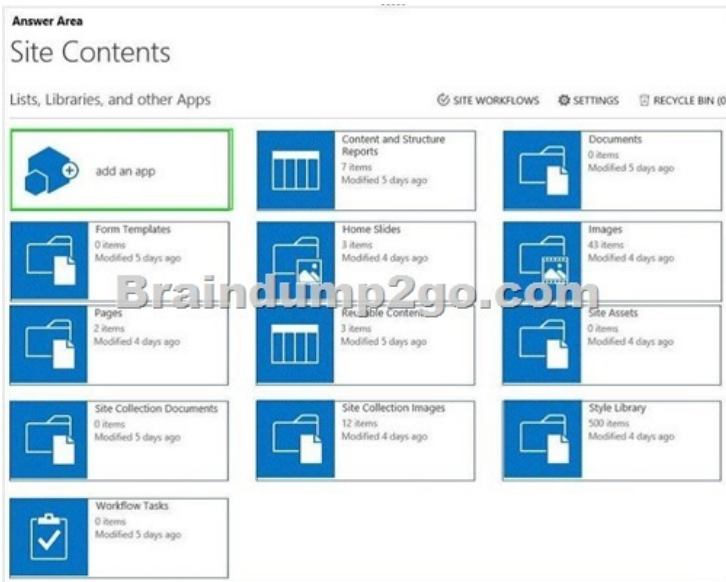

QUESTION 177 You plan to deploy a SharePoint Server 2013 server farm. You need to create four site collections. The site collections must meet the requirements described in the following table.

Site collection name	User must be able to create their own workflows by using Microsoft SharePoint Designer	The site collection administrator must be able to customize master pages by using Microsoft SharePoint Designer
SiteCol1	Yes	No
SiteCol2	Yes	Yes
SiteCol3	No	Yes
SiteCol4	Yes	Yes

What is the minimum number of web applications required to host the site collection? A. 1 B. 2 C. 3 D. 4 Answer: C
 Explanation: * You can manage how Microsoft SharePoint Designer is used at two levels: / Web application level which is applicable to all site collections in the web application and to the site collection administrators. / Site collection level (managed by site collection administrators) which is applicable to all sites in the collection along with the Designers and Owners group. * Enable SharePoint Designer Enable or disable SharePoint Designer 2010 use for an entire application or site collection. If you want to ensure that all designers and owners within a specific site collection can use SharePoint Designer 2010, enable this setting at the site collection level. QUESTION 178 Hotspot Question You have a SharePoint Server 2013 server farm. You need to implement a site mailbox for a site. Which link should you use from Site Contents? (To answer, select the appropriate link in the answer area.)

Answer:

QUESTION 179 Hotspot Question Your company has a SharePoint Server 2013 server farm. Users report that they cannot add iframes to SharePoint pages that point to content on external websites. You need to ensure that the users can add content to iframes from a list of predefined external sites. What should you configure? (To answer, select the appropriate link in the answer area.)
