QUESTION 301 Your network contains two Active Directory forests named contoso.com and nwtraders.com. Active Directory Rights Management Services (AD RMS) is deployed in each forest. You need to ensure that users from the nwtraders.com forest can access AD RMS protected content in the contoso.com forest. What should you do? A. Add a trusted user domain to the AD RMS cluster in the nwtraders.com domain. B. Add a trusted user domain to the AD RMS cluster in the contoso.com domain. C. Create an external trust from nwtraders.com to contoso.com. D. Create an external trust from contoso.com to nwtraders.com. Answer: B Explanation: <http://technet.microsoft.com/en-us/library/hh311036.aspx> QUESTION 302 Drag and Drop Question Your company plans to open a new branch of ce. The new of ce will have a low-speed connection to the Internet. You plan to deploy a read-only domain controller (RODC) in the branch of ce. You need to create an offline copy of the Active Directory database that can be used to install Active Directory on the new RODC. Which commands should you run from Ntdsutil? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

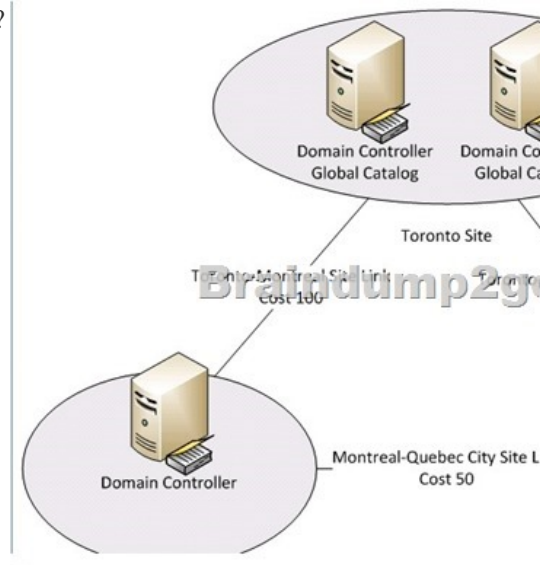

Answer:

Ordered List Title	Answer Choices Title
activate instance ads	activate instance ads
ifm	ifm
create rodc c:\installdata	create rodc c:\installdata
	snapshot
	partition management

QUESTION 303 Your network contains an Active Directory forest. All users have a value set for the Department attribute. From Active Directory Users and computers, you search a domain for all users who have a Department attribute value of Marketing. The

search returns 50 users. From Active Directory Users and Computers, you search the entire directory for all users who have a Department attribute value of Marketing. The search does not return any users. You need to ensure that a search of the entire directory for users in the marketing department returns all of the users who have the Marketing Department attribute. What should you do?  
 A. Install the Windows Search Service role service on a global catalog server.  
 B. From the Active Directory Schema snap-in, modify the properties of the Department attribute.  
 C. Install the Indexing Service role service on a global catalog server.  
 D. From the Active Directory Schema snap-in, modify the properties of the user class.

Answer: B  
 Explanation: <http://technet.microsoft.com/en-us/library/how-global-catalog-servers-work.aspx>  
 QUESTION 304A corporate network includes a single Active Directory Domain Services (AD DS) domain. The AD DS infrastructure is shown in the following graphic. When the Montreal site domain controller is offline, authentication requests for Montreal branch office users are sent to the Toronto site domain controller. You need to ensure that when the Montreal Site domain controller is offline, authentication requests for Montreal branch office users are sent to the Quebec City site domain controller. What should you do?

A. Create a site link bridge between the Montreal site and the Quebec City site.  
 B. Enable the global catalog role on the Montreal site domain controller.  
 C. Modify the Default Domain Policy Group Policy Object.  
 D. Delete the Toronto-Montreal Site Link  
 Answer: C  
 QUESTION 305A corporate environment includes two Active Directory Domain Services (AD DS) forests, as shown in the following table. You need to ensure that users in the contoso.com domain can access resources in the eng.fabrikam.com domain. What should you do?

Forest name	Domain functional level	Forest functional level	Domain(s)
contoso.com	Windows Server 2003	Windows Server 2003	contoso.com
fabrikam.com	Windows Server 2003	Windows Server 2003	fabrikam.com eng.fabrikam.com

A. Enable selective authentication.  
 B. Enable forest-wide authentication.  
 C. Create an external trust between contoso.com and eng.fabrikam.com.  
 D. Enable domain-wide authentication.  
 Answer: C  
 Explanation:

<http://technet.microsoft.com/en-us/library/cc816837.aspx>  
 Creating External Trusts You can create an external trust to form a one-way or two-way, nontransitive trust with domains that are outside your forest. External trusts are sometimes necessary when users need access to resources that are located in a Windows NT 4.0 domain or in a domain that is in a separate Active Directory Domain Services (AD DS) forest that is not joined by a forest trust.  
 QUESTION 306 Your network contains an Active Directory domain. You need to activate the Active Directory Recycle Bin in the domain. Which tool should you use?  
 A. Dsadmin  
 B. Set-ADDomainC.  
 Add-WindowsFeature  
 D. Ldp  
 Answer: D  
 Explanation: <http://technet.microsoft.com/en-us/library/dd379481.aspx>  
 QUESTION 307 Your network contains an Active Directory domain named contoso.com. You need to create a script that runs the Best Practices Analyzer (BPA) each week for all of the server roles that BPA supports on each domain controller. You must achieve this goal by using the minimum amount of administrative effort. Which tools should you use? (Each correct answer presents part of the solution. Choose three.)  
 A. Get-Troubleshooting Pack / Invoke-Troubleshooting Pack.  
 B. Import-Module Best Practices.  
 C. Get-BPA Model / Invoke-BPA Model.  
 D. Import-Module Troubleshooting Pack.  
 E. Get-BPA Result.  
 Answer: BCE  
 QUESTION 308A corporate network includes a single Active Directory Domain Services (AD DS) domain. All regular user accounts reside in an organizational unit (OU) named Employees. All administrator accounts reside in an OU named Admins. You need to ensure that any

time an administrator modifies an employee's name in AD DS, the change is audited. What should you do first? A. Enable the Audit directory service access setting in the Default Domain Controllers Policy Group Policy Object. B. Create a Group Policy Object with the Audit directory service access setting enabled and link it to the Employees OU. C. Enable the Audit directory service access setting in the Default Domain Policy Group Policy Object. D. Modify the searchFlags property for the User class in the schema. Answer: A Explanation: <http://technet.microsoft.com/en-us/library/cc731607.aspx> QUESTION 309 Your network contains an Active Directory domain. You need to back up all of the Group Policy objects (GPOs), Group Policy permissions, and Group Policy links for the domain. What should you do? A. From Group Policy Management Console (GPMC), back up the GPOs. B. From Windows Explorer, copy the content of the %systemroot%\SYSVOL folder. C. From Windows Server Backup, perform a system state backup. D. From Windows PowerShell, run the Backup-GPO cmdlet. Answer: C Explanation: <http://www.microsoft.com/en-us/download/details.aspx?id=22478> QUESTION 310 Your network contains a domain controller that runs Windows Server 2008 R2. You need to reset the Directory Services Restore Mode (DSRM) password on the domain controller. Which tool should you use? A. Ntdsutil B. Dsamain C. Active Directory Users and Computers D. Local Users and Groups Answer: A Explanation: <http://blogs.technet.com/b/meamcs/archive/2012/05/29/reset-the-dsrm-administrator-password.aspx> Want Pass 70-640 Exam At the first try?
