A. In the public DNS zone, create a new alias (CNAME) record named sipfederation.contoso.com.
B. In the public DNS zone, create a new service location (SRV) record named _sipfederationtls._tcp.contoso.com.
C. Deploy a hardware load balancer to the perimeter network.
D. Deploy a Director to the perimeter network.

Explanation: - From scenario: Problem Statements
Users from other companies report that they fail to communicate with the users at Contoso by using federation. That's because there is no DNS record for sipinternaltls in the external contoso.com DNS space.
SRV _sipfederationtls._tcp.contoso.com 5061 The federated partner is running OCS R2, which doesn't support DNS LB. And the requirements state that they must be able to communicate if an edge server fails. Only way around that is HLB. Also, question F7 references an HLB.
