QUESTION 91 You need to recommend a solution to resolve the monitoring issue for the Hyper-V hosts. Which performance object should you recommend? A. Hyper-V Hypervisor Logical Processor B. Processor C. Hyper-V Hypervisor Root Virtual Processor D. Hyper-V Hypervisor Virtual Processor Answer: A Explanation:

[http://msdn.microsoft.com/en-us/library/cc768535\(v=bts.10\).aspx](http://msdn.microsoft.com/en-us/library/cc768535(v=bts.10).aspx) QUESTION 92 Hotspot Question You need to create a Service Level Tracking object to meet the requirements for monitoring the SLA for App1. How should you configure the Service Level Tracking object? (To answer, select the appropriate options in the answer area.)

Answer:

QUESTION 93 You need to recommend a solution to meet the technical requirements for MP1. What should you include in the recommendation? (More than one answer choice may achieve the goal. Select the BEST answer.) A. Aggregate rollup monitors B. Synthetic transactions C. Overrides D. Event collection rules Answer: C QUESTION 94 Drag and Drop Questions You are evaluating the deployment of System Center 2012 Service Manager and System Center 2012 Orchestrator. You need to recommend a solution to meet the technical requirement for backups. In which order should you perform the actions? (To answer, move all of the actions from the list of actions to the answer area and arrange them in the correct order.)

Actions	Answer Area
From Orchestrator, deploy the System Center Integration Pack for System Center 2012 Data Protection Manager and the System Center Integration Pack for System Center 2012 Service Manager.	
Create a request offering and a service offering in Service Manager.	
Create a runbook in Orchestrator.	
From Service Manager, create a service request template that contains an automation activity.	
Create and synchronize an Orchestrator connector in Service Manager.	

Answer:

Actions	Answer Area
From Orchestrator, deploy the System Center Integration Pack for System Center 2012 Data Protection Manager and the System Center Integration Pack for System Center 2012 Service Manager.	From Orchestrator, deploy the System Center Integration Pack for System Center 2012 Data Protection Manager and the System Center Integration Pack for System Center 2012 Service Manager.
Create a request offering and a service offering in Service Manager.	Create and synchronize an Orchestrator connector in Service
Create a runbook in Orchestrator.	Create a runbook in Orchestrator.
From Service Manager, create a service request template that contains an automation activity.	From Service Manager, create a service request template that contains an automation activity.
Create and synchronize an Orchestrator connector in Service Manager.	Create a request offering and a service offering in Service Manager.

QUESTION 95 You need to recommend a solution to meet the update requirement for the Hyper-V hosts. What should you include in the recommendation? (More than one answer choice may achieve the goal. Select the BEST answer.)
A. VMM update baselines
B. System Center 2012 Service Manager workflows
C. Configuration Manager auto deployment rules
D. System Center 2012 Orchestrator runbooks
Answer: A

QUESTION 96 Drag and Drop Questions You are evaluating the deployment System Center 2012 Service Manager. You need to recommend which actions must be performed to meet the technical requirements for the Exchange Server servers. Which four actions should you perform in sequence? (To answer, move the appropriate four actions from the list of actions to the answer area and arrange them in the correct order.)

Actions	Answer Area
Create a service offering in Service Manager.	
Deploy the Service Manager web content server.	
Deploy the Service Manager SharePoint Web Parts to the Web Part Gallery.	
Add the Service Offering Web Part to a SharePoint webpage.	
Add the Request Offering Web Part to a SharePoint webpage.	

Answer:

Actions	Answer Area
Create a service offering in Service Manager.	Deploy the Service Manager web content server.
Deploy the Service Manager web content server.	Deploy the Service Manager SharePoint Web Parts to the Web Part Gallery.
Deploy the Service Manager SharePoint Web Parts to the Web Part Gallery.	Add the Request Offering Web Part to a SharePoint webpage.
Add the Service Offering Web Part to a SharePoint webpage.	Create a service offering in Service Manager.
Add the Request Offering Web Part to a SharePoint webpage.	

QUESTION 97 You need to recommend which System Center 2012 component must be added to the SystemCenter infrastructure to meet the technical requirement for the Configuration Manager service. The solution must minimize administrative effort. Which component should you recommend? A. Service Manager B. App Controller C. Microsoft System Center Advisor (SCA) D. Orchestrator
Answer: A

QUESTION 98 You need to identify the information that is required to discover each switch by using an explicit discovery. Which information do you require for each switch? (Each correct answer presents part of the solution. Choose all that apply.) A. The IP address B. The MAC address C. The management credentials D. The SNMP community string
Answer: AC
Explanation: A. The IP address <http://technet.microsoft.com/en-us/library/hh278846.aspx> To create a network devices discovery rule, you need the following information: The IP address or FQDN of each device that you want to discover and monitor. It are SNMP v3 devices. So you need credentials to discover them.

QUESTION 99 You need to recommend a solution to meet the alerts requirement for the database administrators. What should you recommend? A. Install a cellular modem on TOR-OM1. Create a subscription and a notification channel. B. Install a cellular modem on TOR-CM1. Create a subscription and a notification channel. C. Install a cellular modem on TOR-OM1. Create a monitor and a subscriber. D. Install a cellular modem on TOR-CM1. Create a monitor and a subscriber.
Answer: A
Explanation: <http://technet.microsoft.com/en-us/library/hh212725.aspx> A notification requires the following elements: A Run As account that provides credentials to the Notification Account Run As profile. A notification channel which defines the format for the notification and the method by which the notification is sent. A notification subscriber which defines the recipients and the schedule for sending notifications to the subscriber. A notification subscription which defines the criteria for sending a notification, the channel to be used, and the subscribers to receive the notification.

Case Study 3: A. Datum Corporation (Question 100 - Question 113) Overview A. Datum Corporation is an accounting company that has 3,000 employees. A. Datum has two main offices and five branch offices. The main offices are located in London and New York. The branch offices are located in Asia. All offices connect to each other by using a WAN link. Each office connects directly to the Internet. Existing

EnvironmentActive Directory EnvironmentThe network contains an Active Directory forest named adatum.com. The forest contains a single domain. All domain controllers run Windows Server 2012.Each office contains five domain controllers. Each office is configured as an Active Directory site.System Center 2012 InfrastructureA.Datum has a System Center 2012 infrastructure that contains six servers. The servers are configured as shown in the following table.

Server name	Role
LON-SQL1	Database server for all System Center 2012 components
LON-VMM1	System Center 2012 Virtual Machine Monitor (VMM) server that has all features installed
LON-SM1	System Center 2012 Service Manager server that has all features installed
LON-OR1	System Center 2012 Orchestrator server that has all features installed
LON-OM1	System Center 2012 Operations Manager management server
LON-AC1	System Center 2012 App Controller

System Center 2012 is used to maintain a private cloud named Cloud1. Cloud1 consists of 10 Hyper-V hosts in the London office. Cloud1 hosts the following applications:- A custom accounting application named Appl. App1 consists of four virtual machines. Two of the virtual machines have Microsoft SQL Server 2012 installed. The other two virtual machines have the Web Server (IIS) server role installed. App1 is deployed by using a service template.- A custom marketing application named App2. App2 consists of two virtual machines. One virtual machine has SQL Server 2012 installed. The other virtual machine has the Web Server (IIS) server role installed. App2 is deployed by using virtual machine templates.- System Center 2012 Configuration Manager- Microsoft SharePoint Server 2010- Microsoft Exchange Server 2010- Microsoft Lync Server 2010Problem StatementsThe virtual machine template used to deploy web servers for App2 does not include the Network Load Balancing (NLB) feature. A. Datum plans to scale out App2 to use NLB.RequirementsBusiness GoalsA. Datum plans to make App1 available to its customers by hosting the application in either A. Datum's data center or in a Windows Azure public cloud named Cloud2.A. Datum wants to minimize hardware and software purchasing costs, whenever possible.Planned ChangesA. Datum plans to implement the following changes:- Implement Operations Manager.- To App1, add a server that has Microsoft BizTalk Server deployed.- Deploy a new instance of App1 to the New York office. The instance must comply with the Sarbanes-Oxley Act.- Implement Configuration Manager and integrate Configuration Manager and VMM. Configuration Manager will be used to manage updates for the Hyper-V hosts. Technical RequirementsA. Datum identifies the following technical requirements:- Create a runbook that will be used by Service Manager to create an instance of a virtual machine. The virtual machine will be based on a virtual machine template named VMT1. Users must be able to request the creation of instances of the virtual machine from a self-service portal.- Ensure that the users in the sales department can use a self-service portal to request that a new instance of App1 be created in Cloud1 for a customer. The new instance must only be created if the sales department manager approves the request.- Ensure that if an Exchange Server 2010 service unexpectedly stops, a series of automatic actions is performed to remediate the service failure. The status of each performed action must be logged in an incident.- Monitor App1 to ensure that client computers in the New York office can connect to an instance of App1 hosted in the London office. The monitoring solution must perform tasks that emulate a user accessing Appl.- Ensure that database administrators can access alerts, state information, and performance counters for all of the SQL Server servers in Cloud1 from a SharePoint webpage.- Ensure that the instances of the App2 hosted in Cloud1 are monitored from a graphical diagram that displays all of the components of App2.- Automatically create and assign incidents in Service Manager when an alert is generated in Operations Manager.- Ensure that users can receive alert notifications from Operations Manager as Microsoft Lync instant messaging (IM) messages.- Monitor the availability of the SharePoint Server 2010 server farm from the New York office.- Ensure that administrators can undo changes made to the custom rules created in Operations Manager.- Ensure that help desk users can contact the affected users of an incident by using IM.- Add the new BizTalk Server to App1 by using a service template. QUESTION 100You need to recommend a solution to manage the changes made to the custom rules. The solution must meet the technical requirements.What should you include in the recommendation? (More than one answer choice may achieve the goal. Select the BEST answer.) A. Export the Operations Manager operational database.B. Back up the Operations Manager folder.C. Export the custom management packs.D. Back up the Operations Manager data warehouse database. Answer: CExplanation:C is the only valid answer.A: You should make a backup, not an export.B: The folders won't give you a restore option for the changesD: This is not the location where the changes are stored.
