QUESTION 41You are planning to move streaming media content to Windows Azure Storage. You need to recommend an approach for providing worldwide users the fastest possible access to the content. Which two actions should you recommend? (Each correct answer presents part of the solution. Choose two.) A. Use a Shared Access Signature.B. Use Windows Azure page blob storage.C. Use Windows Azure block blob storage.D. Use the Windows Azure Content Delivery Network (CDN). Answer: CD Explanation: You can store text and binary data in either of two types of blobs: Block blobs, which are optimized for streaming. Page blobs, which are optimized for random read/write operations and which provide the ability to write to a range of bytes in a blob. Windows Azure provides the Windows Azure Content Delivery Network (CDN) to deliver Windows Azure Blob content. Windows Azure CDN offers developers a global solution for delivering high-bandwidth content. The benefit of using a CDN is better performance and user experience for users who are farther from the source of the content stored in the Windows Azure blob storage. QUESTION 42You are designing a plan for migrating Virtual Hard Disks (VHDs) and video files to Windows Azure Storage. The VHDs must be optimized for random read/write operation. The video files must be optimized for sequential access. You need to recommend storage types for storing the VHDs and video files. Which two storage types should you recommend? (Each correct answer presents part of the solution. Choose two.) A. Store VHDs in Windows Azure page blob storage.B. Store VHDs in Windows Azure block blob storage.C. Store video files in Windows Azure page blob storage.D. Store video files in Windows Azure block blob storage. Answer: ADExplanation: You can store text and binary data in either of two types of blobs: Block blobs, which are optimized for streaming. Page blobs, which are optimized for random read/write operations and which provide the ability to write to a range of bytes in a blob. After you create or change the server image, you are ready to upload the .vhd file that contains the image data to Windows Azure. There are two opportunities for uploading VHDs to Windows Azure. When you initially create a VM role, you upload a base VHD to Windows Azure, which is used as a template to create VM role instances. QUESTION 43You are designing a Windows Azure application that will use Windows Azure Table storage. The application will allow teams of users to collaborate on projects. Each user is a member of only one team. You have the following requirements:- Ensure that each user can efficiently query records related to his or her team's projects.- Minimize data access latency. You need to recommend an approach for partitioning table storage entities. What should you recommend? A. Partition by user.B. Partition by team.C. Partition by project.D. Partition by the current date. Answer: B QUESTION 44You deploy a stateless ASP.NET application to an Azure website. You scale out the application by adding website instances. Only newly signed in users are routed to the recently added website instances. Users must be evenly distributed among all of the instances. You need to configure the environment to ensure that the load balancer evenly distributes requests. What should you do? OA Add the following markup to the web.config file for the application:

Option AB. Option BC. Option CD. Option D Answer: C QUESTION 45You store data in an Azure blob. Data accumulates at a rate of 0.10 GB per day. You must use storage analytics data to verify that the service level agreement (SLA) has been met and to analyze the performance of VHDs, including the pattern of usage. Analytics data must be deleted when it is older than 100 days or when the total amount of data exceeds 10 GB. You need to configure storage analytics and access the storage analytics data. Which two approaches will achieve the goal? Each correct answer presents part of the solution. A. Disable the data retention policy.B. Access analytics data by using the Service Management REST APLC. Access analytics data by using the APIs used to read blob and table data.D. Configure a data retention policy of 100 days. Answer: CD QUESTION 46Hotspot QuestionYou store JSON data in a blob by using the Azure Blob service. Web applications access the JSON data by using client-side JavaScript calls. JSON data is stored in a container that is configured to allow anonymous access. Web applications that are allowed to make updates to the data have access to any necessary shared access signatures (SASs) and storage keys. You configure one Cross-Origin Resource Sharing (CORS) rule for the <a href="https://fabrikam.com">https://fabrikam.com</a> domain and then run the following method. Line numbers are provided for reference only. 01 void Configure BlobCorsRules (Clo

```

off hice ff fr n n l f d d e c

of public(orshule.AllowedOrigins.Add("");

public(orshule.AllowedOrigins.add("");
 publicCorsRule.ExposedHeaders.Add("=");
publicCorsRule.AllowedHeaders.Add("=");
blobServiceProperties.Cors.CorsRules.Add(publicCorsRule);
blobClient.SetServiceProperties(blobServiceProperties);
```

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

Answer:

QUESTION 47You develop a web application that will use the Azure Table service. The web application will store entities in the form of XML data within a single table. The web application must support high traffic throughput. You need to avoid exceeding the throttle limit for the table. Which two actions should you take? Each correct answer presents part of the solution. A. partition keys to the table.B. Batch transactions for entities that are in the same partition group in the table.C. Compress the entities before storing them in the table.D. Store the entities in JSON format. Answer: BD OUESTION 48You are managing an application. The application uses data that is stored in an Azure SQL database. You must be able to reset the application to the state that existed on any day in the previous 35 days. You need to choose a backup solution. What should you do? A. Run SQL replication on the SQL database once a day.B. Use Microsoft Azure SQL Database Point in Time RestoreC. Use the SQL Server Data-Tier Application Framework to build a data-tier application (DAC) file once a day.D. Use the bcp utility to export data to an Azure page blob once a day. Answer: B QUESTION 49Hotspot QuestionTailspin Toys uses a website to manage its inventory. The website is hosted on Azure. You are writing a Windows Store app that uses data from the blob storage. You need to retrieve an image from the following URI:https://tailspintoys.blob.core.windows.net/Trains/Caboose2jpg.How should you complete the relevant code? To answer, select the appropriate code segments in the answer area.

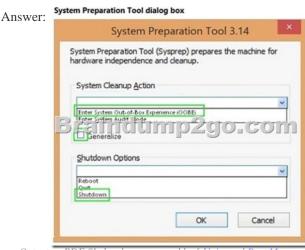

QUESTION 50Hotspot QuestionYou have an existing server that runs Windows Server. You plan to create a base image of this server. You will use this base image to prepare several virtual servers for future use. After the base image is prepared, you will capture it by using the Azure management portal. You must use the System Preparation Tool (Sysprep) to prepare the server so that the base image can be captured. You need to prepare the server so that the base image can be captured. What should you do? To System Preparation Tool dialog box

answer, configure the appropriate options in the dialog box in the answer area.

100% 70-532 Complete Success & Money Back Guarantee!By utilizing Braindump2go high quality Microsoft 70-532 Exam Dumps Products, You can surely pass 70-532 certification 100%! Braindump2go also offers 100% money back guarantee to individuals in case they fail to pass Microsoft 70-532 in one attempt.
