QUESTION 111 You need to recommend a disaster recovery strategy for the Inventory database. What should you include in the recommendation? A. Log shipping B. SQL Server Failover Clustering C. AlwaysOn availability groups D. Peer-to-peer replication Answer: A Explanation: \* Scenario: / You must be able to recover data from the Inventory database if a storage failure occurs. You have a Recovery Point Objective (RPO) of one hour. / A. Datum Corporation has offices in Miami and Montreal. \* SQL Server Log shipping allows you to automatically send transaction log backups from a primary database on a primary server instance to one or more secondary databases on separate secondary server instances. The transaction log backups are applied to each of the secondary databases individually. About Log Shipping (SQL Server) QUESTION 112 You need to recommend a solution to meet the security requirements of the junior database administrators. What should you include in the recommendation? A. A server role B. A database role C. A credential D. A shared login Answer: C Explanation: \* Scenario: A group of junior database administrators must be able to view the server state of the SQL Server instance that hosts the Sales database. The junior database administrators will not have any other administrative rights. \* Credentials provide a way to allow SQL Server Authentication users to have an identity outside of SQL Server. Credentials can also be used when a SQL Server Authentication user needs access to a domain resource, such as a file location to store a backup. Create a Credential QUESTION 113 You need to recommend a solution to ensure that USP\_4 adheres to the security requirements. What should you include in the recommendation? A. Enable SQL Server Audit. B. Enable trace flags. C. Configure data manipulation language (DML) triggers. D. Enable C2 audit tracing. Answer: A Explanation: \* Scenario: A stored procedure named USP\_4 calls stored procedures in the Sales, Customers, and Inventory databases. The nested stored procedures read tables from the Sales, Customers, and Inventory databases. USP\_4 uses an EXECUTE AS clause. \* Beginning in SQL Server 2008 Enterprise, you can set up automatic auditing by using SQL Server Audit. SQL Server Audit (Database Engine) QUESTION 114 You need to recommend a solution to minimize the amount of time it takes to execute USP\_5. What should you include in the recommendation? A. Enable cross-database chaining. B. Use a server role to group all logins. C. Use the EXECUTE AS clause in USP\_5. D. Copy USP\_5 to each database. Answer: A Explanation: \* scenario: A stored procedure named USP\_5 changes data in multiple databases. Security checks are performed each time USP\_5 accesses a database. \* Cross-database ownership chaining occurs when a procedure in one database depends on objects in another database. A cross-database ownership chain works in the same way as ownership chaining within a single database, except that an unbroken ownership chain requires that all the object owners are mapped to the same login account. If the source object in the source database and the target objects in the target databases are owned by the same login account, SQL Server does not check permissions on the target objects. [http://technet.microsoft.com/en-us/sqlserver/bb669059\(v=vs.71\).aspx](http://technet.microsoft.com/en-us/sqlserver/bb669059(v=vs.71).aspx) QUESTION 115 You need to recommend a solution for the planned changes to the customer classifications. What should you recommend? (Each correct answer presents part of the solution. Choose all that apply.) A. Add a row to the Customers table each time a classification changes. B. Add columns for each classification to the Customers table. C. Add a table to track any changes made to the classification of each customer. D. Add a column to the Classifications table to track the status of each classification. E. Implement change data capture. Answer: CD Explanation: \* scenario: You plan to change the way customers are classified. The new classifications will have four levels based on the number of orders. Classifications may be removed or added in the future. Incorrect: not E: Change data capture provides information about DML changes on a table and a database. By using change data capture, you eliminate expensive techniques such as user triggers, timestamp columns, and join queries. QUESTION 116 You need to recommend a change to USP\_3 to ensure that the procedure completes only if all of the UPDATE statements complete. Which change should you recommend? A. Set the

XACT\_ABORT option to off.  
 B. Set the XACT\_ABORT option to on.  
 C. Set the IMPLICIT\_TRANSACTIONS option to off.  
 D. Set the IMPLICIT\_TRANSACTIONS option to on.  
 Answer: B  
 Explanation: \* Scenario: A stored procedure named USP\_3 is used to update prices. USP\_3 is composed of several UPDATE statements called in sequence from within a transaction. Currently, if one of the UPDATE statements fails, the stored procedure continues to execute. \* When SET XACT\_ABORT is ON, if a Transact-SQL statement raises a run-time error, the entire transaction is terminated and rolled back. QUESTION 117 You need to recommend a change to USP\_3 to ensure that the procedure continues to execute even if one of the UPDATE statements fails. Which change should you recommend?  
 A. Set the XACT\_ABORT option to off.  
 B. Set the XACT\_ABORT option to on.  
 C. Set the IMPLICIT\_TRANSACTIONS option to off.  
 D. Set the IMPLICIT\_TRANSACTIONS option to on.  
 Answer: A  
 Explanation: \* Scenario: A stored procedure named USP\_3 is used to update prices. USP\_3 is composed of several UPDATE statements called in sequence from within a transaction. Currently, if one of the UPDATE statements fails, the stored procedure continues to execute. \* When SET XACT\_ABORT is OFF, in some cases only the Transact-SQL statement that raised the error is rolled back and the transaction continues processing. <http://msdn.microsoft.com/en-us/library/ms188792.aspx> QUESTION 118 You need to recommend a solution for the error handling of USP\_4. The solution must handle errors for nested stored procedures in the code for USP\_4. What should you recommend?  
 A. Use the @@ERROR variable in the nested stored procedures.  
 B. Use the @@ERROR variable in USP\_4.  
 C. Use the RAISERROR command in the nested stored procedures.  
 D. Use the RAISERROR command in USP\_4.  
 Answer: C  
 Explanation: \* A stored procedure named USP\_4 calls stored procedures in the Sales, Customers, and Inventory databases. The nested stored procedures read tables from the Sales, Customers, and Inventory databases. USP\_4 uses an EXECUTE AS clause. <http://msdn.microsoft.com/en-us/library/ms178592.aspx> QUESTION 119 You need to recommend a solution to minimize the amount of time it takes to execute USP\_1. With what should you recommend replacing Table1?  
 A. A view.  
 B. A temporary table.  
 C. A table variable.  
 D. A function.  
 Answer: A  
 Explanation: \* A stored procedure named USP\_1 generates millions of rows of data for multiple reports. USP\_1 combines data from five different tables from the Sales and Customers databases in a table named Table1. CREATE TABLE (SQL Server) QUESTION 120 You are designing a Windows Azure SQL Database for an order fulfillment system. You create a table named Sales.Orders with the following script.

```
CREATE TABLE Sales.Orders
(
    OrderID int IDENTITY(1,1) NOT NULL PRIMARY KEY,
    OrderDate datetime(4) NOT NULL,
    CustomerID int NOT NULL
);
```

Each order is tracked by using one of the following statuses: Fulfilled, Shipped, Ordered, Received. You need to design the database to ensure that that you can retrieve the following information:- The current status of an order.- The previous status of an order.- The date when the status changed. The solution must minimize storage. More than one answer choice may achieve the goal. Select the BEST answer.  
 A. To the Sales.Orders table, add three columns named Status, PreviousStatus and ChangeDate. Update rows as the order status changes.  
 B. Create a new table named Sales.OrderStatus that contains three columns named OrderID, StatusDate, and Status. Insert new rows into the table as the order status changes.  
 C. Implement change data capture on the Sales.Orders table.  
 D. To the Sales.Orders table, add three columns named FulfilledDate, ShippedDate, and ReceivedDate. Update the value of each column from null to the appropriate date as the order status changes.  
 Answer: B  
 For those who feel the overwhelming anxiety before their 70-469 exam, Braindump2go Latest updated 70-469 Exam Dumps will help you Pass 100% in a short time preparation!
