contoso.com and adatum.com. The contoso.com network and the adatum.com network are separated by a firewall. No trusts exist between the forests. You deploy System Center 2012 Operations Manager to adatum.com. You install agents on 100 servers in both forests. You need to ensure that you can monitor all 100 servers. The solution must minimize the traffic between the two networks. What should you install? (Each correct answer presents part of the solution. Choose all that apply.) A. A server certificate on the gateway server in contoso.com B. A gateway server in adatum.com C. A server certificate on the gateway server in adatum.com D.

Client certificates on all of the servers in adatum.com E. A gateway server in contoso.com F. A server certificate on the management server in adatum.com G. Client certificates on all of the servers in contoso.com Answer: AEF QUESTION 2 Drag and Drop Question Your company has a private cloud that is managed by using a System Center 2012 Operations Manager infrastructure. You need to ensure that members of a group named Group1 can resolve printing alerts by using the Operations Manager console. The solution must minimize the number of Operations Manager permissions assigned to Group1. Which three actions should you perform in sequence? (To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.)

Answer:

Explanation: 1. Import the Windows Server Print Server Management Pack - Required for monitoring printing <http://technet.microsoft.com/en-us/library/cc181012.aspx> 2. Create an Operator User Role - Required to add Group1 to SCOM 3. Scope the User Role - To set this role to access print alerts only No - Create an event viewer alert, technically feasible to set logging of print queues and then monitor events but Microsoft always asked for the BEST solution, hence the Print MP No - Create a Subscription, there is no mention of notifications in the question No - Create a run as account, the question says resolve the print ALERT not the fault itself QUESTION 3 You need to recommend a solution to implement the planned changes for the research department. What should you include in the recommendation? (More than one answer choice may achieve the goal. Select the BEST answer.) A. The existing VMM infrastructure B. The existing Service Manager infrastructure C. A solution that includes System Center 2012 App Controller D. The existing Orchestrator infrastructure Answer: A Explanation: There is no existing SCOM infrastructure, App Controller is overkill, so use the existing VMM infrastructure. QUESTION 4 Your company has a private cloud that contains a Microsoft ASP.NET application. The application is hosted by Internet Information Services (IIS) on a server named Server1. The application is accessed by using multiple URLs. You configure a watcher node on a server named Server2. You need to ensure that an alert is generated each time the watcher node receives an HTTP error of 400 or more. The solution must ensure that the cause of the alert is captured. Which type of monitor should you create from the Operations Manager console? A. Windows Service B. Process C. Web Application Transaction Monitoring D. TCP Port Answer: C QUESTION 5 Your company has a private cloud that is managed by using a System Center 2012 Operations Manager infrastructure. The network contains three devices. The devices are configured as shown in the following table.

Device name	Type	Community string
router1	SNMPv1	INTERNAL
router2	SNMPv1	INTERNAL
Switch1	SNMPv2c	CONTOSO

You need to ensure that Operations Manager can discover all of the devices. What should you do? A. From the Operations Manager console, create one group and set the group to Dynamic Members. B. From the Operations Manager console, create two Run As Accounts. C. From the Operations Manager Shell, run the Set-SCOMUserRole cmdlet. D. From the Operations Manager Shell, run the Enable-SCOMDiscovery cmdlet. Answer: B Explanation: Each SNMPv3 device would need its own run as account. As there are no SNMPv3 devices in the list only v1/v2 we need just one run as account per different community string. As there are two different community strings used for the 3 devices we need two run as accounts.

<http://technet.microsoft.com/en-us/library/hh212920.aspx> QUESTION 6 Your company has a private cloud that is managed by using a System Center 2012 infrastructure. You have a web application named WebApp1 that is hosted in another datacenter. The datacenter is not part of the private cloud. You need to ensure that Service Manager incidents are generated automatically when WebApp1 is unavailable. What should you create? A. a Service Level Tracking object B. an event rule C. a synthetic transaction D. a service offering Answer: C Explanation: To monitor the application that runs on these traditional platforms we leverage custom MP's, synthetic transactions to be able to test websites, and HTTP probes to test web services ensuring that the outside-in functionality of the application is available.
