<https://1drv.ms/f/s!AvI7wzKf6QBjgTGwhbcWvLDn5gQS> QUESTION 1 Which three guidelines and limitation of policy-based routing are true? (Choose 3) A. A match command can refer to more than one ACL in a route map used for policy-based routing. B.

The same route map can be shared among different interfaces for policy-based routing as long as the interfaces belong to the same VRF instance. C. Setting a tunnel interface or an IP address via a tunnel interface as a next hop in a policy-based routing policy is not supported. D. An ACL used in a policy-based routing route map cannot include a deny statement. E. A policy-based routing route map can have multiple match or set statements per route-map statement. F. Policy-based routing and WCCPv2 are not supported on the same interface chaining is disabled. Answer: BCD QUESTION 2 You configured a new appliance port, but the port has a pinning failure. Which option is a possible cause? A. The appliance port admin speed must be adjusted. B. Appliance

VLANS are duplicated in global VLAN. SC. The appliance is configured for NPVD. Appliance VLANs are missing duplicate global VLANs. Answer: D QUESTION 3 Which options is a consortium of service providers and vendors that address NFV architecture and orchestration for NFV? A. IEEE B. IETF C. ONF D. ETSI Answer: D QUESTION 4 Refer to the exhibit. When utilizing the Cisco application virtual switch in an ACI fabric, it can be deployed in two types of switching modes. Which 2 types of encapsulation can be used in each mode? (Choose 2) A. No local switching : VXLAN B. No local switching : vLAN or vxLAN. C.

No local switching : VLAN. D. Local switching : VLAN E. Local switching : VLAN OR VXLAN F. Local switching : VXLAN Answer: AE QUESTION 5 Which description of how to enable DIMM blacklisting is true? A. Enable blacklisting in the servers policy subtab. B. Enable blacklisting in the servers inventory memory subtab. C. Configure a memory policy under the services tab. D. Configure a memory policy in the equipment policy subtab. Answer: A QUESTION 6 Refer to the exhibit. An admin wants to bring online a new leaf node into their ACI fabric. Before registering the leaf node, the admin checks the current status and sees this output. Which option is the reason for the admin to see this output? A. The DHCP server running on the APIC has failed and this the leaf node has not been able to obtain an IP address. B. The leaf node is yet to be physically connected to the fabric. C. This output is expected until the admin registers the leaf node and assigns it a role. D. This output is expected until the admin registers the leaf node with an ID and name. E. This wrong catalog firmware is running on the APIC. Answer: E QUESTION 7 Which

programming language is used at the core of OpenStack? A. Java B. Python C. Ruby D. C++ Answer: B QUESTION 8 Refer to the exhibit. Which two CLI actions are appropriate to try to resolve the enhanced zoning lock problem? (Choose 2) A. Use the show zone internal vsan 16 command to determine the IP address of the user and the MDS switch where the lock is currently held. B. Use the no zone commit vsan command on the switch that holds the lock to release the lock if you are the holder of the lock. C.

Use the no zone commit vsan <vsan id> force command on the switch that holds the lock to release the lock if another user holds the lock. D. Use the clear zone lock command to remove the lock. Use this command on each switch in the fabric for vsan 16 only. E. Using either Cisco Fabric Manager or the CLI, reactivate the existing zone set for VSAN 16. Be careful to only reactivate and not deactivate to avoid a disruption in service. Answer: BD QUESTION 9 Which standard REST API method allows you to create a managed object? A. POST B. GET C. PATCH D. SET Answer: A Explanation:

<http://aci-troubleshooting-book.readthedocs.io/en/latest/rest.html>
http://www.cisco.com/c/en/us/td/docs/unified_computing/ucs/ucs-director/rest-api-getting-started-guide/5-4/b_REST_API_Getting_Started_Guide_54.html Write Operations Create and update operations to the REST API are actually both implemented using the POST method, so that if an object does not already exist it will be created, and if it does already exist, it will be updated to reflect any changes between its existing state and desired state. Both create and update operations can contain complex object hierarchies, so that a complete tree can be defined within a single command, so long as all objects are within the same context root and they are under the 1MB limit for data payloads to the REST API. This limit is in place to guarantee performance and protect the system under high load. QUESTION 10 Refer to the exhibit. Which statement about this output from two different switches is true? A.

Based on this exhibit, a zone merge problem will not occur, but a warning is generated that indicates that some minor differences in the zone set exist. B. There is no way to tell if a zone merge problem will be encountered with just the current display. Additional commands will need to be performed in order to determine if a problem exists. C. Based on this exhibit, a zone merge problem will occur. D. This exhibit shows no problem. No zone merge issues occur for VSAN 1 based on the current displays. Answer: B

QUESTION 11 Refer to the exhibit. Which two CLI actions are appropriate to try to resolve the enhanced zoning lock problem? (Choose 2) A. Use the show zone internal vsan 16 command to determine the IP address of the user and the MDS switch where the lock is currently held. B. Use the no zone commit vsan command on the switch that holds the lock to release the lock if you are the holder of the lock. C. Use the no zone commit vsan <vsan id> force command on the switch that holds the lock to release the lock if another user holds the lock. D. Use the clear zone lock command to remove the lock. Use this command on each switch in the fabric for vsan 16 only. E. Using either Cisco Fabric Manager or the CLI, reactivate the existing zone set for VSAN 16. Be careful to only reactivate and not deactivate to avoid a disruption in service. Answer: BD QUESTION 12 Refer to the exhibit. Which standard REST API method allows you to create a managed object? A. POST B. GET C. PATCH D. SET Answer: A Explanation:

<http://aci-troubleshooting-book.readthedocs.io/en/latest/rest.html>
http://www.cisco.com/c/en/us/td/docs/unified_computing/ucs/ucs-director/rest-api-getting-started-guide/5-4/b_REST_API_Getting_Started_Guide_54.html Write Operations Create and update operations to the REST API are actually both implemented using the POST method, so that if an object does not already exist it will be created, and if it does already exist, it will be updated to reflect any changes between its existing state and desired state.
