 QUESTION 61Your company plans to upgrade 1,000 client computers to Windows 7.The company uses a custom line-of-business application that is frequently updated.The application is not compatible with Windows 7.You need to ensure that the company can use the application.You also need to ensure that the application can be updated with the least amount of administrative effort.What should you do? A.   Deploy Microsoft Enterprise Desktop Virtualization (MED-V) v2 to all Windows 7 clientcomputers, and distribute the virtual machine image and updates through MED-V TrimTransfer.B.   Deploy Microsoft Enterprise Desktop Virtualization (MED-V) v2 to all Windows 7 clientcomputers, and distribute the virtual machine image and updates through Microsoft System Center Configuration Manager.C.   Configure Windows XP Mode on all Windows 7 client computers, and distribute the virtualmachine image and updates through a file share resource.D.   Configure Windows XP Mode on all Windows 7 client computers, and distribute the virtualmachine image and updates through Microsoft System Center Configuration Manager. Answer: B QUESTION 62A company has an Active Directory Domain Services (AD DS) forest with a single domain.Domain controllers are located in the companys offices in New York and Boston.You deploy a group policy at the domain level that includes security filtering.You discover that Group Policy object (GPO) settings are being applied to computers in the New York office, but not to computers in the Boston office.You suspect there might be replication problems with the policies. What should you do? A.   Run a Group Policy Results report against computers in the Boston office.B.   Run a Group Policy Modeling report against computers in the Boston office.C.   Use the GpoTool.exe command-line tool.D.   Use the RepAdmin.exe command-line tool. Answer: A QUESTION 63All portable computers on a company's wireless network run windows 7 Enterprise.You need to ensure that users can connect only to the predefined SSID shown in the work area.Which Group Policy object (GPO) settings should you select? To answer, select the appropriate setting or settings in the work area.

   Answer:

QUESTION 64You are managing data migration from an existing Windows 7 computer to a new Windows 7 computer. You need to migrate user and application data from the existing computer to the new computer.Which command should you run on the existing and new computers? (To answer, drag the appropriate commands to the correct location in the work area.)

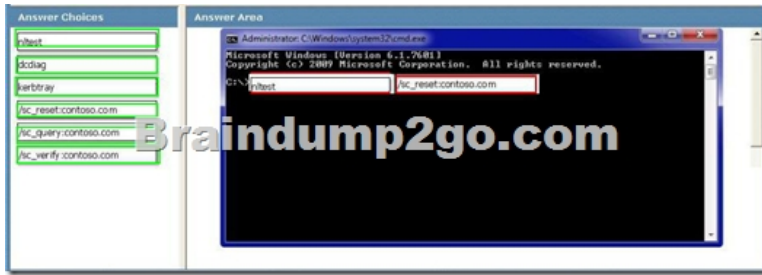

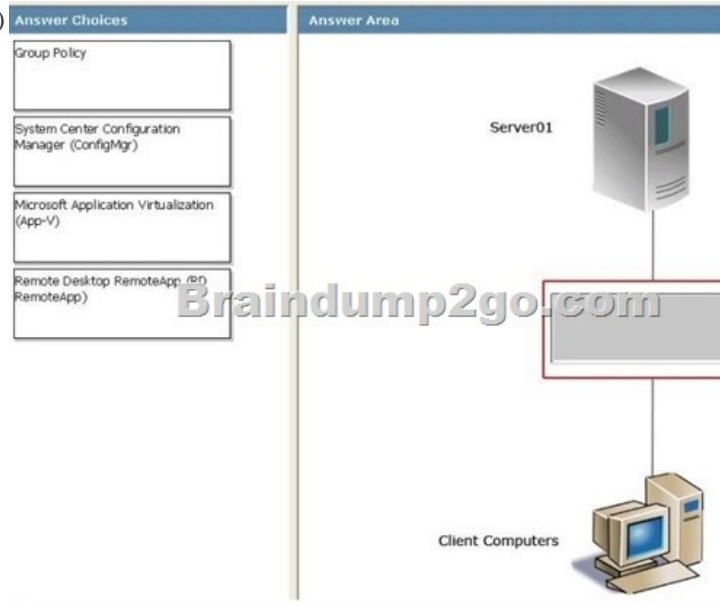

Answer:

QUESTION 65An enterprise organization has computers that run Windows 7. Users log on to the Contoso.com domain from their client computers.A user is unable to log on to the domain. The user changed his password the previous night and was unable to log on this morning. After reviewing the event logs, you notice a large amount of NETLOGON errors.You need to ensure that the user can log on to the domain.Which command should you run? (To answer, drag the appropriate command and parameter from the list of commands and parameters to the correct location or locations in the work area.)
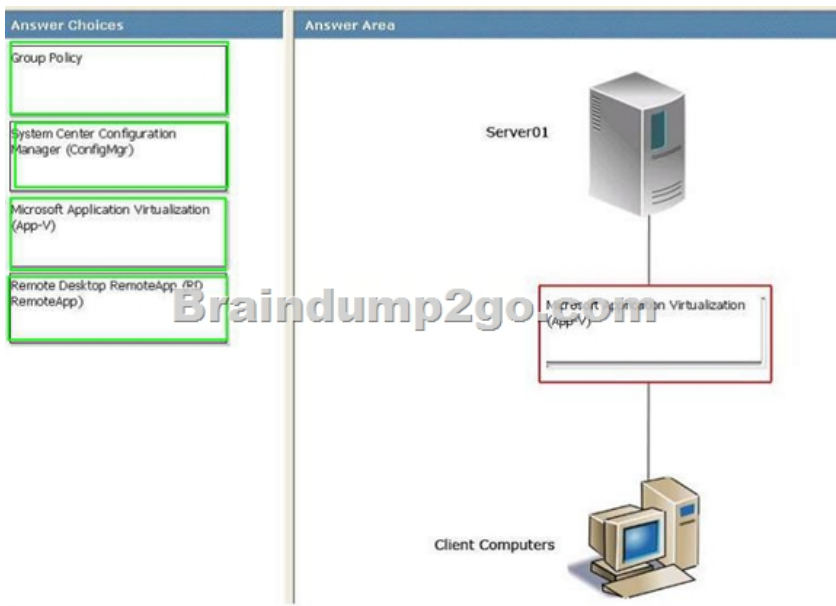

Answer:

QUESTION 66You are designing an application deployment strategy.Application deployments must meet the following requirements:- They must be able to use Setup.exe.- They must not require Active Directory.- They must not require a constant network connection.- The application installation schedule must be easy to set up and implement.You need to recommend a method that meets the requirements.What should you recommend? (To answer, drag the appropriate deployment method from the list of deployment methods to the correct location or locations in the work area.)

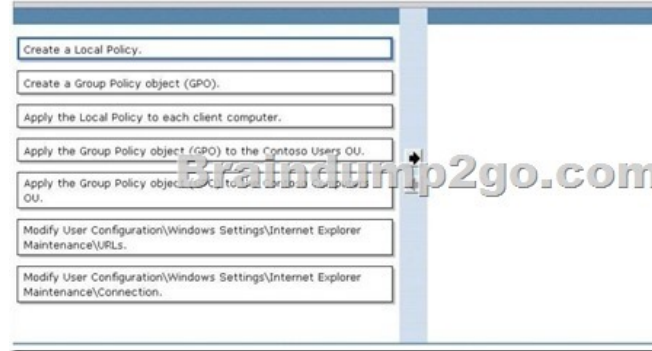

Answer:

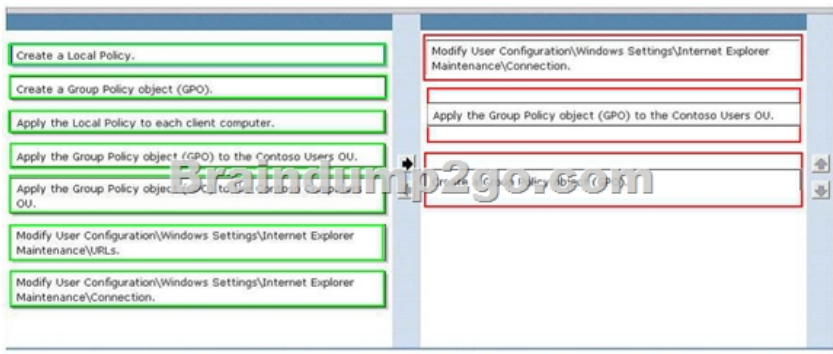

QUESTION 67All client computers in an organization run Windows 7 and are joined to an Active Directory Domain Services (AD DS) domain. All user objects are stored in an Organizational Unit (OU) named Contoso Users. All computer objects are stored in an OU named Contoso Computers.You need to add a proxy server to the Microsoft Internet Explorer 9 configuration on all client

computers by using the least administrative effort.Which three actions should you perform? (To answer, move the appropriate action from the list ofactions to the answer area and arrange them in the correct order.)

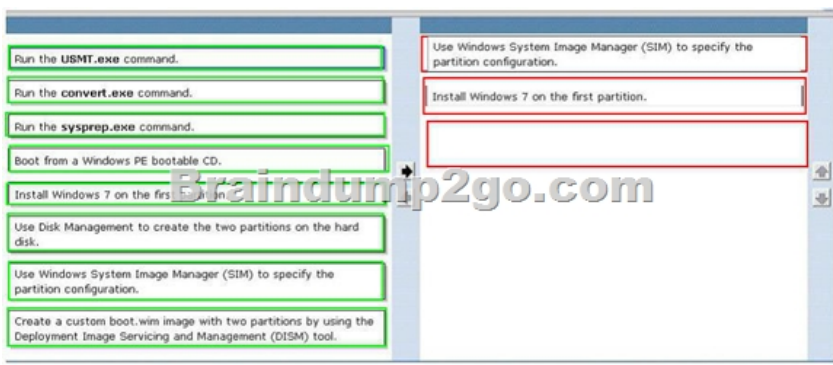

Answer:

QUESTION 68You are planning to deploy Windows 7 Enterprise to all of your company's client computers.You have the following requirements:- Create two custom partitions on each client computer's hard disk, one for the operating system and the other for data.- Automatically create the partitions during Windows Setup.You need to design an image that meets the requirements. Which two actions should you perform in sequence? (To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order)

Answer:

QUESTION 69When a user attempts to connect to a server named Server1 by using Remote Desktop Connection (RDC), he receives the following error message.You need to assign the least amount of privilege to the user to ensure that he can connect to

Server1 by using RDC.To which group should you add the user?

   A.   Add the user to the Power Users group on Server1.B.   Add the user to the Remote Desktop Users group on Server1.C.   Add the user to the domain Windows Authorization Access group.D.   Add the user to the domain Remote Desktop Users group Answer: B QUESTION 70Your companys network has client computers that run Windows 7.A software vendor releases version 2 of an application that your company uses.Your company currently uses version 1. Version 1 and version 2 are not compatible.You plan to deploy version 2 of the application.You have the following requirements:- Users must be able to run both versions of the application on their computers.- Version 2 must be available when a client computer is not connected to the network.You need to plan a software deployment process that meets the requirements. What should you do? (Choose all that apply.) A.   Deploy version 2 of the application by using Microsoft Application Virtualization (App-V).B.   Deploy version 2 of the application by using Microsoft Enterprise Desktop (MED-V).C.   Deploy version 2 of the application as a Remote Desktop Services RemoteApp.D.   Deploy version 2 of the application by using a Microsoft System Center Configuration Manager package. Answer: ABExplanation: Microsoft Application Virtualization (MS App-V) platform allows applications to be deployed in real-time to any client from a virtual application server. It removes the need for local installation of the applications. Instead, only the App-v client needs to be installed on the client machines. All application data is permanently stored on the virtual application server.Whichever software is needed is either streamed or locally cached from the application server on demand and run locally. The App-V stack sandboxes the execution environment so that the application does not make changes to the client itself (OS File System and/or Registry). App-V applications are also sandboxed from each other, so that different versions of the same application can be run under App-V concurrently.http://en.wikipedia.org/wiki/Microsoft_App-V   Braindump2go New Updated 70-686 Exam Dumps are Complete Microsoft 70-686 Course Coverage! 100% Real Questions and Correct Answers Guaranteed!
