[New 70-741 Dumps!100% Exam Pass-70-741 PDF Exam Dumps Free from Braindump2go[143-153

2018/Sep Braindump2go 70-741 Exam Dumps with PDF and VCE New Updated Today! Following are some new 70-741 Real Exam Questions: 1.|2018 Latest 70-741 Exam Dumps (PDF & VCE) 207Q&As

Download:https://www.braindump2go.com/70-741.html2.|2018 Latest 70-741 Exam Questions & Answers Download:https://drive.google.com/drive/folders/0B75b5xYLjSSNSUt4dmtFZ2pDQkk?usp=sharingQUESTION 143Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution. After you answer a question in this sections, you will NOT be able to return to it. As a result, these questions will not appear in the review screen. Your network contains an Active Directory forest named contoso.com. The forest has three sites located in London, Paris, and Berlin. The London site contains a web server named Web1 that runs Windows Server 2016. You need to configure Web1 as an HTTP content server for the hosted cache servers located in the Paris and Berlin sites. Solution: You install the Static Content role service, and then you restart the IIS Admin Service. Does this meet the goal? A. YesB. NoAnswer: B QUESTION 144Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution. After you answer a question in this sections, you will NOT be able to return to it. As a result, these questions will not appear in the review screen. Your network contains an Active Directory domain named contoso.com. The domain contains a member server named Server1 that runs Windows Server 2016 and has the DNS Server server role installed. Automatic scavenging of stale records is enabled and the scavenging period is set to 10 days. All client computers dynamically register their names in the contoso.com DNS zone on Server1. You discover that the names of multiple client computers that were removed from the network several weeks ago can still be resolved. You need to configure Server1 to automatically remove the records of the client computers that have been offline for more than 10 days. Solution: You set the Expires after value of the zone. Does this meet the goal? A. YesB. No Answer: BQUESTION 145 Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution. After you answer a question in this sections, you will NOT be able to return to it. As a result, these questions will not appear in the review screen. You have a server named Server1 that has the Network Policy and Access Services server role installed. You create a Shared Secret Network Policy Server (NPS) template named Template 1. You need to view the shared secret string used for Template 1. Solution: From Windows PowerShell, you run Get-NpsSharedSecretTemplate -Name Template 1. Does this meet the goal? A. YesB. NoAnswer: BQUESTION 146Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution. After you answer a question in this sections, you will NOT be able to return to it. As a result, these questions will not appear in the review screen. You have a server named Server1 that has the Network Policy and Access Services server role installed. You create a Shared Secret Network Policy Server (NPS) template named Template 1. You need to view the shared secret string used for Template 1. Solution: From the Network Policy Server console, you export the configuration, and you view the exported XML file.Does this meet the goal?A. YesB. NoAnswer: AQUESTION 147Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution. After you answer a question in this sections, you will NOT be able to return to it. As a result, these questions will not appear in the review screen. You have a server named Server1 that has the Network Policy and Access Services server role installed. You create a Shared Secret Network Policy Server (NPS) template named Template 1. You need to view the shared secret string used for Template 1. Solution: From the Network Policy Server console, you view the properties of Template 1. Does this meet the goal? A. YesB. No Answer: B QUESTION 148Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution. After you answer a question in this sections, you will NOT be able to return to it. As a result, these questions will not appear in the review screen. Your network contains an Active Directory domain named contoso.com. The domain contains a DHCP server named Server2 than runs Windows Server 2016. Users report that their client computers fail to obtain an IP address. You open the DHCP console as shown in the Exhibit. (Click the Exhibit button.) Scope1 has an address range of 172.16.0.10 to 172.16.0.100 and a prefix length of 23 bits. You need to ensure that all of the client computers on the network can

obtain an IP address from Server2. Solution: You run the Set-DhcpServerv4MulticastScope cmdlet. Does this meet the goal? A. Yes B. NoAnswer: BOUESTION 149You manage a Windows Server 2016 software-defined network. Network Controller is installed on a three-node domain-joined cluster of virtual machines. You need to add a new access control list (ACL) for the network controller to the network interface on a tenant virtual machine. The ACL will have only one rule that prevents only outbound traffic from the 10.10.10.0/24 subnet. You plan to run the following Windows PowerShell commands. \$\frac{1}{2}\$ rule properties = new-object Microsoft.Windows.NetworkController.AclRuleProperties\$ruleproperties.SourcePortRange = "0-65535" \$\text{\$\text{\$ruleproperties.DestinationPortRange}} = \text{\$0-65535}\text{\$\text{\$ruleproperties.Action}} = \text{\$\text{\$Deny}\text{\$\text{\$}}\text{\$\text{\$ruleproperties.Priority}} = \text{\$\text{\$\$100}\text{\$\text{\$}}}} \$ruleproperties.Type = "Outbound"\$ruleproperties.Logging = "Enabled"Which three remaining properties should you add to the rule? Each correct answer presents part of the solution, (Choose three,)NOTE: Each correct selection is worth one point.A. \$\text{\$\text{sruleproperties}.SourceAddressPrefix} = "10.10.10.0/24"B. \text{\$\text{\$\text{\$ruleproperties}.DestinationAddressPrefix} = "10.10.10.0/24"C.} \$\text{\$\text{sruleproperties.Protocol}} = \text{"ALL"D.} \text{\$\text{\$\text{ruleproperties.Protocol}} = \text{"TCP"E.} \text{\$\text{\$\text{\$\text{\$ruleproperties.SourceAddressPrefix}} = \text{"*"F.}} \$ruleproperties.DestinationAddressPrefix = "*"Answer: ACFQUESTION 150Note: This question is part of a series of questions that use the same or similar answer choices. An answer choice may be correct for more than one question in the series. Each question is independent of the other questions in this series. Information and details provided in a question apply only to that question. You have multiple servers that run Windows Server 2016. You have a server named Server1 that is configured as a domain controller and a DNS server. You need to create an Active Directory-integrated zone on Server1. What should you run? A. dism.exe B. dns.exeC. dnscmd.exeD. netsh.exeE. Set-DhcpServerDatabaseF. Set-DhcpServerv4DnsSettingG. Set-DhcpServerv6DnsSettingH. Set-DNSServerSettingAnswer: CQUESTION 151Note: This question is part of a series of questions that use the same or similar answer choices. An answer choice may be correct for more than one question in the series. Each question is independent of the other questions in this series. Information and details provided in a question apply only to that question. Your network contains an Active Directory domain named contoso.com. The domain contains a DHCP server named Server2 that runs Windows Server 2016. Server2 has 10 IPv4 scopes. You need to ensure that the scopes are backed up every 30 minutes to the folder D:DHCPBackup.What should you run?A. dism.exeB. dns.exeC. dns.cmd.exeD. netsh.exeE. Set-DhcpServerDatabaseF. Set-DhcpServerv4DnsSettingG. Set-DhcpServerv6DnsSettingH. Set-DNSServerSettingAnswer: E QUESTION 152Note: This question is part of a series of questions that use the same or similar answer choices. An answer choice may be correct for more than one question in the series. Each question is independent of the other questions in this series. Information and details provided in a question apply only to that question. You have multiple servers that run Windows Server 2016. The DNS Server server role is installed on a server named Server1. You need to configure Server1 to use a DNS forwarder that has an IP address of 192.168.10.15. What should you run? A. dism.exe B. dns.exe C. dnscmd.exe D. netsh.exe E. Set-DhcpServerDatabaseF. Set-DhcpServerv4DnsSettingG. Set-DhcpServerv6DnsSettingH. Set-DNSServerSettingAnswer: C QUESTION 153Note: This question is part of a series of questions that use the same or similar answer choices. An answer choice may be correct for more than one question in the series. Each question is independent of the other questions in this series. Information and details provided in a question apply only to that question. You have a server named Server1 that runs Windows Server 2016. You install the DHCP Server server role on Server1. You need to authorize DHCP on Server1. What should you run? A. dism.exeB. dns.exeC. dnscmd.exeD. netsh.exeE. Set-DhcpServerDatabaseF. Set-DhcpServerv4DnsSettingG. Set-DhcpServerv6DnsSettingH. Set-DNSServerSettingAnswer: D!!!RECOMMEND!!!1.|2018 Latest 70-741 Exam Dumps (PDF & VCE) 207Q&As Download:https://www.braindump2go.com/70-741.html2.|2018 Latest 70-741 Study Guide Video: YouTube Video: YouTube.com/watch?v=P6xjGxeYzKY
