

New Released Microsoft 70-467 Exam Questions from Microsoft Exam Centre! (121-130)

Do you want to pass Microsoft 70-467 Exam ? If you answered YES, then look no further. Braindump2go offers you the best 70-467 exam questions which cover all core test topics and certification requirements. All REAL questions and answers from Microsoft Exam Center will help you be a 70-467 certified! Vendor: MicrosoftExam Code: 70-467Exam Name: Designing Business Intelligence Solutions with Microsoft SQL Server 2012 Exam

QUESTION 121A company has a data warehouse that is rapidly increasing in size. You plan to improve query performance by partitioning a very large fact table. You need to identify the columns that are good partitioning candidates and the range that each partition should include. Which component should you add to the package? To answer, drag the appropriate component from the list of items to the answer area.

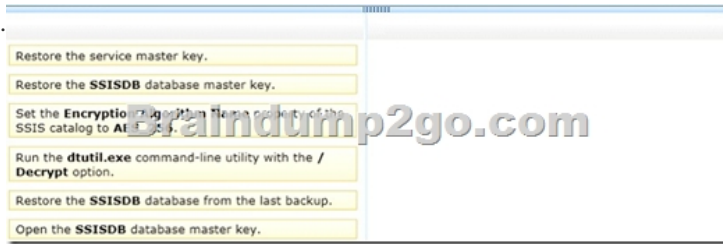

Answer:

QUESTION 122A company runs SQL Server Database Engine and SQL Server Reporting Services (SSRS) in native mode. Reports are based on data that is cached in multiple shared datasets. Source data is archived each day at midnight for regulatory compliance purposes. The shared datasets may continue to cache data that should not be used in reports. Shared report schedules are often paused during nightly server maintenance windows. Reports must not return archived data. You need to create a fully automated solution to ensure that reports do not deliver archived data. What should you do? (More than one answer choice may achieve the goal. Select the BEST answer.) A. Write a script that calls the flushcache method to clear individual items from the SSRS cache. Create a SQL Server Agent job that runs rs.exe with the script as an input file, and schedule the job to run every day after the archive process completes. B. Create a SQL Server Agent job that uses a Transact-SQL (T-SQL) step to truncate the dbo.ExecutionCache table in the ReportServerTempDB database. Schedule the job to run every day after the archive process completes. C. Create a SQL Server Agent job that restarts the SQL Server Reporting Services service. Schedule the job to run every day after the archive process completes. D. Create a shared schedule. Configure the datasets to expire on the shared schedule. Answer: A QUESTION 123 You are the administrator of a SQL Server Integration Services (SSIS) catalog. You have access to the original password that was used to create the SSIS catalog. A full database backup of the SSISDB database on the production server is made each day. The server used for disaster recovery has an operational SSIS catalog. Information that is encrypted in the SSISDB database must not be

lost. You need to document the disaster recovery solution that restores the production SSIS catalog to the disaster recovery server. Which three steps should you document in sequence? (To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.)

Answer:

QUESTION 124 You are setting role permissions for a SQL Server Analysis Service (SSAS) cube. You plan to grant Read access for specific attribute members only to specific Active Directory security groups. You need to enter a Multidimensional Expressions (MDX) expression to configure the attribute member access. On which tab should you enter the MDX expression? To answer, select the appropriate tab in the answer area.

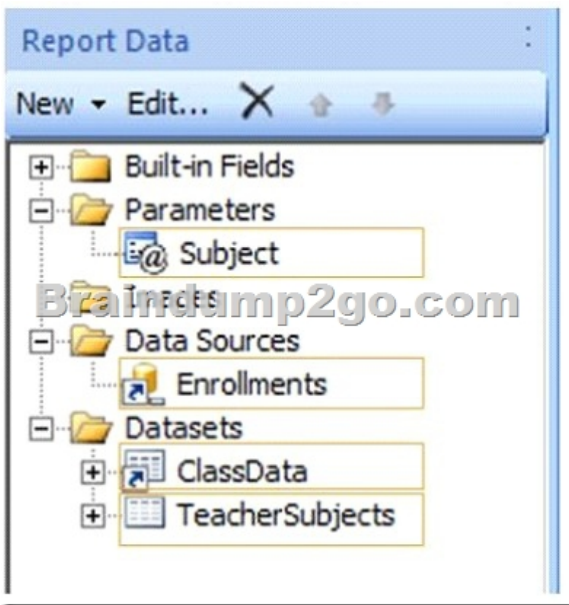

Answer:

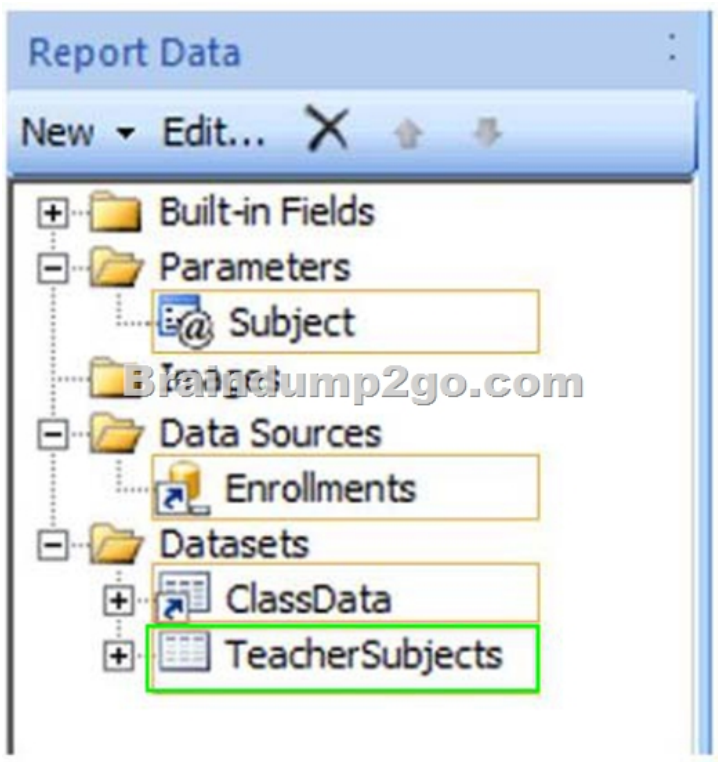

QUESTION 125 You have a SQL Server Reporting Services (SSRS) 2008 instance integrated with an Internet-facing Microsoft SharePoint 2010 farm. PerformancePoint Services and Excel Services are installed and configured. You need to upgrade to SSRS 2012 with the minimum downtime and hardware requirements. What should you do? (More than one answer choice may achieve the goal. Select the BEST answer.) A. Migrate SSRS content to a separate instance of SSRS 2012 on the same server. B. Perform an in-place upgrade of the SSRS environment. C. Migrate SSRS content to new servers that run SSRS 2012. D. Install SSRS 2012 on a new SharePoint farm and migrate content to the new farm. Answer: C

QUESTION 126 You are redesigning a SQL Server Analysis Services (SSAS) database that contains a cube named Sales. Before the initial deployment of the cube, partition design was optimized for processing time. The cube currently includes five partitions named FactSales1 through FactSales5. Each partition contains from 1 million to 2 million rows. A. Use the Usage-Based Optimization Wizard to create aggregations for the current partitions. B. Use the Aggregation Design Wizard to create aggregations for the current partitions. C. Combine all the partitions into a single partition. Use the Usage-Based Optimization Wizard to create aggregations. D. Combine all the partitions into a single partition. Use the Aggregation Design Wizard to create aggregations. Answer: A

QUESTION 127 A school stores information about teachers, students, classes, and enrollments in a Windows Azure SQL Database database. The database includes a table that maps the user IDs of teachers to the subjects they teach. Teachers access reports in a SQL Server Reporting Services (SSRS) instance by using their credentials. You are developing a report that displays a table of class enrollments for a specific subject. The report will prompt teachers to select from their mapped subjects. The table is based on a dataset named ClassData. To minimize report execution time, the ClassData dataset has been configured to cache all class enrollment data. You need to ensure that the report parameter displays the correct subjects for each teacher. Which item should you configure? To answer, select the appropriate item in the answer area.

Answer:

QUESTION 127 You have a SQL Server 2012 database named DB1. You have a backup device named Device1. You discover that the log file for the database is full. You need to ensure that DB1 can complete transactions. The solution must not affect the chain of log sequence numbers (LSNs). Which code segment should you execute? A. BACKUP LCG DB1 TO Device1 WITH COPY_ONLY B. BACKUP LOG DB1 TO Device1 C. BACKUP LOG DB1 TO Device1 WITH NCRECCVERYD. BACKUP LOG D31 TO Device1 WITH TRUNCATE ONLY Answer: B

QUESTION 128 A group of report writers develop reports. The report writers currently use Report Builder 1.0 and report models. The report writers are not trained on SQL Server query writing. Their report assignments come from various departments within the organization. The company is upgrading to SQL Server 2012 with SQL Server Reporting Services (SSRS) in native mode. After the upgrade, reports will retrieve data from a large new data warehouse that will reside on an instance of the SQL Server 2012 Database Engine. Reports for each department will retrieve data from only a subset of the data warehouse tables. You are designing the data access strategy. You have the following requirements:- Ensure that report writers can create only reports that display data which they have database permissions to view.- Minimize the

effort required to update connection strings for all reports developed by the report writers.- Minimize the number of fields visible in a specific report for report writers who work for multiple departments.You need to design the data access strategy.What should you do? (More than one answer choice may achieve the goal. Select the BEST answer.) A. Create report models by using SQL Server Data Tools (SSDT). Include data sources and data source views for each department's data requirements. Configure each data source to use integrated security.B. Create one shared data source that uses integrated security. Create an embedded dataset for each report.C. Create one shared data source that uses integrated security. Create one shared dataset that includes all tables required by the report writers. D. Create one shared data source that uses integrated security. Create a shared dataset for each department's data requirements. Answer: D QUESTION 129You have a database for a mission-critical web application. The database is stored on a SQL Server 2012 instance and is the only database on the instance. The application generates all T-SQL statements dynamically and does not use stored procedures. You need to maximize the amount of memory available for data caching. Which advanced server option should you modify? A. scan for Startup ProcsB. Allow Triggers to Fire OthersC. Enable Contained DatabasesD. Optimize for Ad hoc Workloads Answer: C QUESTION 130You have a server that has SQL Server 2012 installed. You need to identify which parallel execution plans are running in serial. Which tool should you use? A. Data Profile ViewerB. Database Engine Tuning AdvisorC. Performance MonitorD. Extended Events Answer: D For those who feel the overwhelming anxiety before their 70-467 exam,Braindump2go Latest updated 70-467 Exam Dumps will help you Pass 100% in a short time preparation! 70-467 Exam Dumps PDF & VCE Full Version Instant Download!
