A. Farm2 and Farm3B. Farm1C. Farm2D. Farm1 and Farm2 Answer: QUESTION 62 Drag and Drop Question An organization plans to install apps in its production SharePoint environment hosted at sharepoint.contoso.com.The services necessary to host and enable apps have not been configured. You need to configure the environment to host SharePoint apps. Which three actions should you perform in sequence? (To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.)

Answer:

Explanation: * To create a wildcard Alias (CNAME) record for the new domain name The Fully qualified domain name (FQDN) box displays *. followed by the domain name that you created for apps. For example, *.ContosoApps.com or *.Contoso-Apps.com. (box 2) * Overview of how to configure an environment for apps for SharePoint

Before you begin
Buy a domain for apps from a domain provider **ContosoApps.com**

On your DNS Server

- 1 Create a forward lookup zone for apps **ContosoApps.com**
- 2 Create a CNAME alias from the app domain to the SharePoint domain ***.ContosoApps.com -> SharePoint.Contoso.com**

For SSL (https:// URLs)

- 3 Create a wildcard SSL certificate for the domain **https://*.ContosoApps.com**

On your SharePoint Servers

- 4 Configure the Subscription Settings service application by using Windows PowerShell.
- 5 Configure the App Management service application (Central Administration or Windows PowerShell).
- 6 Configure the App URLs in Central Administration **Domain: ContosoApps.com Prefix: Apps**

* SharePoint-hosted apps for SharePoint are installed on a SharePoint 2013 website, called the host web, and that have their resources hosted on an isolated subsite of a host web, called the app web. This approach enables you to reuse common SharePoint artifacts, such as lists and Web Parts. When you take this approach, you can use only JavaScript and you cannot use any server-side code. <https://technet.microsoft.com/en-us/library/fp161236.aspx> QUESTION 63 You are configuring SharePoint 2013 to support business intelligence. You need to install PowerPivot for SharePoint. What should you do? A. Download and install PowerPivot for SharePoint from the PowerPivot SQL Server 2008 R2 SP1 Feature Pack webpage. B. Download and install PowerPivot for SharePoint from the PowerPivot SQL Server 2012 SP1 Feature Pack webpage. C. Run the SQL Server 2012 setup package. D. Run the SQL Server 2008 R2 SP1 setup package. Answer: B Explanation: To use PowerPivot for SharePoint on SharePoint 2013, it is required to install PowerPivot for SharePoint with the Slipstream version of SQL Server 2012 SP1. If you install SQL Server 2012 and then use the upgrade version of SQL Server 2012 SP1 to upgrade, the environment will not support SharePoint 2013. For more information on BI features and changes to installation with SQL Server 2012 SP1, see the following: [https://msdn.microsoft.com/en-us/library/jj219067\(v=sql.110\).aspx](https://msdn.microsoft.com/en-us/library/jj219067(v=sql.110).aspx) QUESTION 64 You are moving a customized SharePoint site collection to a new farm. You attach and mount the source content database in the destination farm. You need to ensure that all customizations from the source farm are available in the destination farm. What should you do? A. Copy all custom master pages from the source site collection to the master page gallery in the destination site collection. B. Copy all custom site definitions from the file system of the source farm to the destination farm. C. Copy all permission levels from the source farm to the destination farm. D. Copy all search indexes from the source farm to the destination farm. Answer: B QUESTION 65 You are creating a SharePoint site that will be accessed from the following devices:- Client computers- Windows Phone devices- Windows 8 RT devices You need to optimize the SharePoint experience for the listed devices. What should you configure? A. Device channels B. Image renditions C. Design Manager D. Custom list views E. Variations Answer: A QUESTION 66 You are moving a customized SharePoint site collection to a new farm. You attach and mount the source content database in the destination farm. You need to ensure that all customizations from the source farm are available in the destination farm. What should you do? A. Install all custom applications in the destination farm. B. Configure alternate access mappings on the source server. C. Copy all search indexes from the source farm to the destination farm. D. Copy all SharePoint groups and users from the source farm to the destination farm. Answer: A QUESTION 67 Hotspot Question An organization has two SharePoint farms named FarmA and FarmB. You need to configure FarmA to consume the Managed Metadata service from FarmB. In Central Administration, which command should you select to complete the configuration? (To answer, select the appropriate command in the answer area.)

Answer:

QUESTION 68 Hotspot Question A company uses SharePoint Server to manage document templates. Each department stores its templates in a department-specific site collection. All templates use a content type named Corporate Templates. Templates are stored in document library apps with other types of files. The Search service application must meet the following requirements:- Users can search from a single location across all department site collections. - Search results include content from all site collections that contain templates. You need to configure the Search service application to meet the requirements. On the Search Administration page, which search feature should you configure? (To answer, select the appropriate feature in the answer area.)

Answer:

Explanation: It is barely obvious in question that we need to narrow results to only templates. If we do, then we can use Result Sources for that: <https://technet.microsoft.com/en-us/library/dn186229.aspx> A query transform, which can narrow results from the given search provider or URL to a specified subset - for example, a subset that has a particular content type QUESTION 69 Drag and Drop Question A company plans to upgrade a SharePoint 2010 farm to SharePoint Server 2013. The site collection administrators will upgrade the SharePoint sites. The SharePoint 2013 environment contains a web application dedicated to the upgrade process.

You need to migrate SharePoint 2010 content to the SharePoint 2013 environment. Before completing the upgrade process, you must ensure that all required customizations have been deployed. Which three actions should you perform in sequence? (To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.)

Answer:

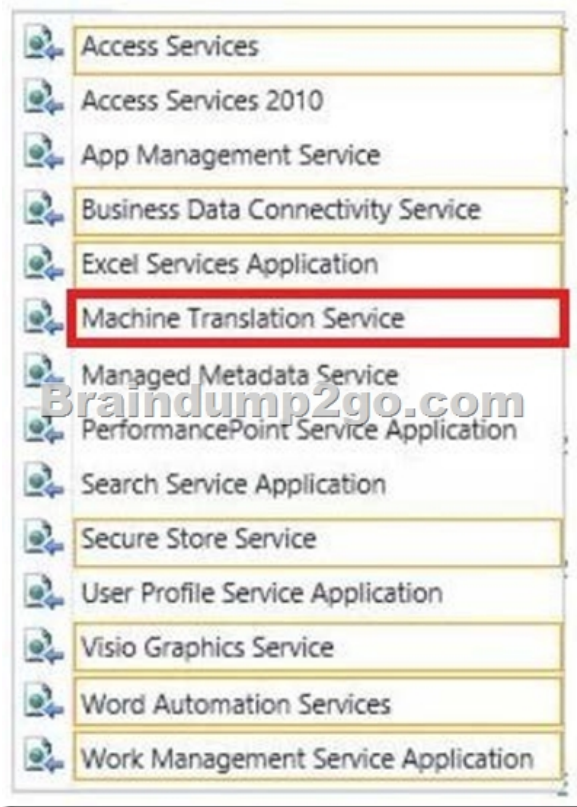

Explanation: * You must use the Mount-SPContentDatabase cmdlet to attach a content database to a web application. * (incorrect) Using the SharePoint Central Administration pages to attach a content database is not supported for upgrading. * This is the fourth phase in the process to upgrade SharePoint 2010 Products data and sites to SharePoint 2013. The process includes the following phases that must be completed in order: 1. Create the SharePoint 2013 farm for a database attach upgrade 2. Copy databases to the new farm for upgrade to SharePoint 2013 3. Upgrade service applications to SharePoint 2013 4. Upgrade content databases to SharePoint 2013 (this phase) 5. Upgrade site collections to SharePoint 2013 * Test-SPContentDatabase Tests a content database. Use the Test-SPContentDatabase cmdlet to test a content database against a Web application to verify all customizations referenced within the content database are also installed in the web application. This cmdlet can be issued against a content database currently attached to the farm, or a content database that is not connected to the farm. It can be used to test content databases from SharePoint 2010 Products and from SharePoint Products and Technologies. * (incorrect) There is no method Move-SPWebApplication

QUESTION 70 Hotspot Question You develop an application that creates variations of a submitted page. These variations display the original authored page in three different languages. You need to create a service application to support the language conversion efforts. Which service application should you create? (To answer, select the appropriate service application in the answer area).
