The application will authenticate users by using their Yahoo account credentials.You need to determine the correct payload for each stage of the authentication process.What should you do? To answer, drag the appropriate payload format to the correct location on the dialog box. Each payload format may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

Answer:

QUESTION 58You plan to deploy an application as a cloud service. The application uses a virtual network to extend your on-premises network into Azure.You need to configure a site-to-site VPN for cross-premises network connections.Which two objects should you configure? Each correct answer presents part of the solution. A. Dynamic routing gatewayB. VPN gatewayC. External-facing IPv6 addressD. External-facing IPv4 address Answer: BD QUESTION 59Hotspot QuestionYou have a WebJob object that runs as part of an Azure website. The WebJob object uses features from the Azure SDK for .NET. You use a well-formed but invalid storage key to create the storage account that you pass into the UploadDataToAzureStorage method.The WebJob object contains the following code segment. Line numbers are included for reference only.

```
01 void UploadDataToAzureStorage(CloudStorageAccount storageAccount,  
02 string storageContainerName, string blobpath, string localpath)  
03 {  
04     CloudBlobClient blobClient = storageAccount.CreateCloudBlobClient();  
05     CloudBlobContainer blobContainer = blobClient.GetContainerReference(blobpath);  
06     blobContainer.UploadFromFile(localpath, FileNode.Open());  
07 }
```

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

Answer Area	Yes
If the storage container does not already exist when the code runs, a file can still be uploaded.	<input type="radio"/>
If a transient fault occurs when the code segment on line 06 runs, the Azure SDK will attempt to upload the file again.	<input type="radio"/>
The code segment at line 06 will fail when the code runs.	<input type="radio"/>

Answer:

Answer Area	Yes	No
If the storage container does not already exist when the code runs, a file can still be uploaded.	<input type="radio"/>	<input checked="" type="radio"/>
If a transient fault occurs when the code segment on line 06 runs, the Azure SDK will attempt to upload the file again.	<input checked="" type="radio"/>	<input type="radio"/>
The code segment at line 06 will fail when the code runs.	<input checked="" type="radio"/>	<input type="radio"/>

QUESTION 60 Drag and Drop Question You create a web application. You publish the source code of the web application to a GitHub repository by using Microsoft Visual Studio. You create a website by using the Azure management portal. You must continuously deploy the web application from the GitHub repository website to the Azure website. You need to deploy the source code of the web application. Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions	Answer Area
Select the repository and the branch from which to deploy the Azure website.	
Select GitHub as the source control method.	
Configure the Azure website to use the Always On option.	
In the Azure management portal, choose the option to set up deployment from source control.	
Sign in to GitHub by using your deployment credentials.	

Answer:

Actions	Answer Area
Select the repository and the branch from which to deploy the Azure website.	In the Azure management portal, choose the option to set up deployment from source control.
Select GitHub as the source control method.	Select GitHub as the source control method.
Configure the Azure website to use the Always On option.	Configure the Azure website to use the Always On option.
In the Azure management portal, choose the option to set up deployment from source control.	Select the repository and the branch from which to deploy the Azure website.
Sign in to GitHub by using your deployment credentials.	

QUESTION 61 A company creates an API and makes it accessible on an Azure website. External partners use the API occasionally. The website uses the Standard web hosting plan. Partners report that the first API call in a sequence of API calls occasionally takes longer than expected to run. Subsequent API calls consistently perform as expected. You need to ensure that all API calls perform consistently. What should you do? A. Configure the website to use the Basic web hosting plan. B. Enable Always On support. C. Configure the website to automatically scale. D. Add a trigger to the web.config file for the website that causes the website to recycle periodically. Answer: B !!!RECOMMEND!!! 1.Braindump2go |2016/09 New 70-532 Exam Dumps(PDF & VCE) 105Q&As Download:<http://www.braindump2go.com/70-532.html> 2.Braindump2go |2016/09 New 70-532 Exam Questions & Answers:
