What two scenarios would explain why the virtual machine was not restarted? (Choose two.) A. VM Monitoring is required in order for VMCP to failover during an APD event. B. VMware Tools is not installed on the guest operating system for the VM. C. Insufficient Capacity is available on the failover ESXi hosts. D. The APD failure was corrected before the VM could be restarted. Answer: CD Explanation:

<https://communities.vmware.com/thread/553779> QUESTION 462 What are two requirements in order to restore a Resource Pool Tree from a snapshot? (Choose two.) A. vSphere DRS must be turned on. B. A restore can only be performed on a vSphere DRS cluster within the original vCenter Server. C. vSphere DRS must be turned off. D. A restore can only be performed on the same cluster the snapshot was taken from. Answer: AD Explanation: You can restore a previously saved resource pool tree snapshot. Prerequisites vSphere DRS must be turned ON. You can restore a snapshot only on the same cluster that it was taken. No other resource pools are present in the cluster.
